| lsass.exe | 856 | Running | SYSTEM | 00 | 5,448 K | Not allowed |

Is LMIGuardianSvc.exe safe?

Is LMIGuardianSvc.exe virus or malware?

The first thing that helps you determine whether a particular file is a legitimate Windows process or a virus is the location of the file. For example, a process like LMIGuardianSvc.exe should run from **C: Program Fileslogmein hamachihamachi-2-ui.exe** and not elsewhere.

To confirm, open Task Manager, go to **View> Select Columns** and select **Image Path Name** to add the location column to **Task Manager**. If you find a suspicious directory here, it would be better to dig deeper into that process.

Another tool that can sometimes help you detect bad processes is Microsoft's **Process Explorer**. Start the program (no installation required) and activate **Check Legends** in **Options** Now go to **View> Select Columns** and add **Verified Signer** as one of the columns.

If the **Verified Signer** status of a process is listed as **Unable to Verify** , you should take some time to review the process. Not all good Windows processes have a **Verified Signature** label , but bad processes cannot be labeled as well.

The most important information about LMIGuardianSvc.exe include:

1. Located in subdirectory **C: Program FilesLogMeIn Hamachi**
2. Publisher: **LogMeIn, Inc.**
3. Full path: **C: Program Fileslogmein hamachihamachi-2-ui.exe**
4. Help file: **secure.logmein.com/products/hamachi/support.asp**
5. Publisher URL: **secure.logmein.com/products/hamachi/download.aspx**

How to determine if the LMIGuardianSvc.exe process is reliable

It is known to have a capacity of up to 4.77MB on most versions of Windows, so if you encounter any difficulties with this executable file, you should determine if it is trustworthy before deleting LMIGuardianSvc.exe. .

To do this, find this process in Task Manager.

Find its location (the file must be in **C: Program FilesLogMeIn Hamachi**) and compare with the above information.

If you suspect that you may have been infected with the virus, you should try to fix it immediately. To remove LMIGuardianSvc.exe virus, you should download and install a reliable antivirus software like Malwarebytes. Note that not all tools can detect all types of malware, so you may need to try some options before finding the right one.

In addition, the virus function may affect the removal of LMIGuardianSvc.exe. In this case, you must enable **Safe Mode with Networking** - a security environment that disables most processes and only loads the most necessary services and drivers. You can then run a complete security and system analysis program.
