

What is Opera One web browser? What can it do?

Opera has some powerful and feature-rich browsers that are solid alternatives to Chrome, Edge, and Firefox. Opera's browsers are generally reliable, and you can easily set one up as your primary or backup browser.

Opera is constantly releasing new features for its browsers, including AI Prompts, ChatGPT integration, and ChatSonic which it implemented in March 2023. However, Opera wants to start over with the Opera web browser. One. It's currently in its infancy but has promised better performance and user interface improvements to help make Opera even more competitive with today's competitors.

So what is Opera One and what's new with it?

What is Opera One web browser?

Opera has announced the release of the Opera One web browser on April 25, 2023. This completely redesigned desktop browser will replace Opera for Windows, macOS, and Linux by the end of 2023.

Opera One is completely different from Opera GX, Opera for Chromebooks, Opera Mini and Opera Crypto Browser. It adopts Modular Design approach. According to Opera, ".Opera One delivers a fluid navigation experience and changes the way you interact with your browser".

Many users wonder if Opera One is one of Opera's many other browsers, the answer is no. So what can Opera One do that other Opera web browsers can't?

What can Opera One do?

Opera One uses Multithreaded Compositor, revolutionizing its performance and UI threading. It is also the first Chromium-based browser with this technology. And by combining it with Modular Design, Opera One becomes a formidable browser.

Opera One adapts to your needs, pushing key and relevant features to the front, while leaving rarely used features behind. This makes it easier to find features you use often, making browsing more efficient. However, it can also make you forget features that are rarely used.

The newly improved browser will also easily integrate with new powerful AI-based features developed by Opera in the future. But if you don't want to download and try Opera One browser too soon, you can set up and use AI in Opera's current browser.

Main features of Opera One: Tab Islands

In addition to Modular Design and Multithreaded Compositor, the other main feature of the Opera One web browser is the Tab Islands feature. Essentially a tab grouping feature, Tab Islands helps you manage your Opera tabs more efficiently.

Tab Islands can distinguish tabs by distinct colors and clear borders. When you open a new tab, Tab Islands automatically groups it into other tabs with the same context. You can also create Tab Island for open web pages using the CTRL button or the Command button.

You can add to an existing Tab Island by dragging and dropping or by pressing the plus button next to a Tab Island. Tab Islands can also be moved by dragging and dropping them to the desired position. Tab Islands is a sign of commitment to creating Opera features that make browsing the web productive.

Do more with Opera One

The Opera One web browser has a bright future, with Opera's unwavering commitment to continuous research and development across its entire browser family. With that, you'll notice some user interface and performance improvements with the Opera One web browser, especially in terms of design, speed, and traffic. Furthermore,

you can improve the way you manage your open tabs with Tab Islands.

This is especially useful if you are struggling with too many tabs. As a responsive and responsive browser, it will also help you take advantage of more features you use often.
