

What is Powerful? Why should you not 'abuse' this mode on the air conditioner?

Powerful mode on the air conditioner is an upgraded Cool mode, helping to reduce the room temperature faster by increasing the cooling capacity of the air conditioner by 10%. This is also the strongest mode of air conditioning.

Powerful mode on the air conditioner is an upgraded Cool mode, helping to reduce the room temperature faster by increasing the cooling capacity of the air conditioner by 10%. This is also the strongest mode of air conditioning.

When Powerful mode is activated, both the compressor and blower are pushed to the highest power level.

This mode will be maintained for up to 20 minutes, then the air conditioner automatically switches back to normal cooling mode (Cool).

How to activate Powerful mode

To activate Powerful mode, you just need to press the Powerful button on the air conditioner control. When the air conditioner makes a 'beep' sound and the 'athlete' icon appears on the control screen, Powerful mode has been successfully activated.

Why should you not use Powerful mode?

Powerful mode will put the air conditioner into a 'full power' state continuously for up to 20 minutes to achieve 10% more powerful operation than normal cooling mode. If you use Powerful mode for a long time and with

high frequency, you need to clean and maintain the air conditioner more often than usual.

In Powerful mode, the air conditioner will consume more electricity because it operates at high capacity continuously. Therefore, users need to limit the use of Powerful mode if they do not really need to cool the room 'almost immediately' to avoid incurring unnecessary costs.

If you want to cool down quickly when you get home, users can do a few tips to cool the air conditioner faster such as turning on the air swing mode to cool the room more evenly, opening the door to let hot air fly out, Use additional fans to optimize power and make air conditioning use more durable.
