You've heard of Proxy, but you don't fully understand what Proxy is? How to use Proxy when browsing the web? So let's you TipsMake.com learn about proxies in the article below.

Here TipsMake.com share to you what is the concept of proxy? And how to use Proxy when browsing the web, please follow along.

## What is a proxy?

**Proxy** is an **Internet server** that is responsible for relaying information and controlling to create security for Internet access of clients (or customers using Internet services). Station proxy settings called proxy servers. Proxy or proxy setting station has an IP address and a fixed access port.

For example: 123.234.111.222:80. The IP address of the proxy in the example is 123.234.111.222 and the access port is 80.

Specifically, when you want to access a website with domain abc.com, by default this webserver will block all connections with IP from Vietnam, so to be able to access your website, you will use another Proxy. .

# How to use Proxy when browsing the web

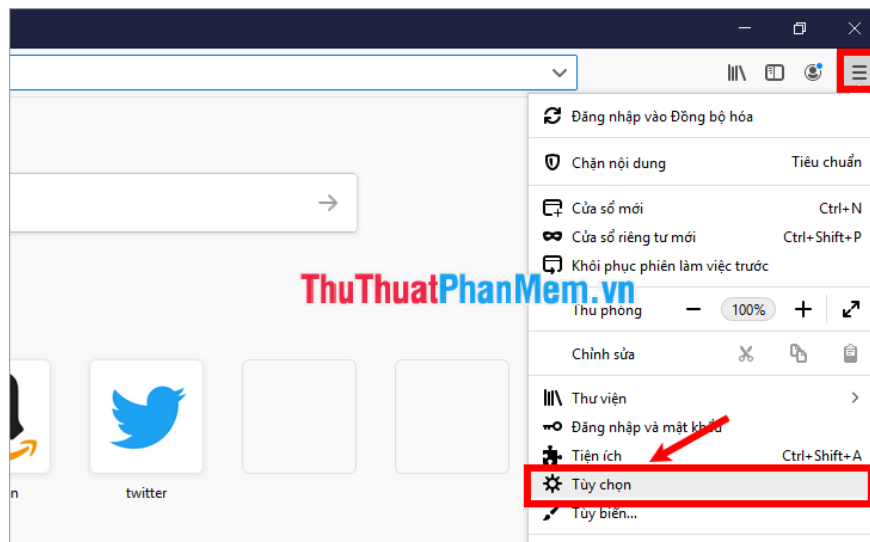

**Step 1** : You can access many websites sharing Proxy for free, such as <http://www.gatherproxy.com/proxylistbycountry> to find the IP addresses of Proxy Servers.

**Step 2:** Install on a web browser.

## Fire Fox browser

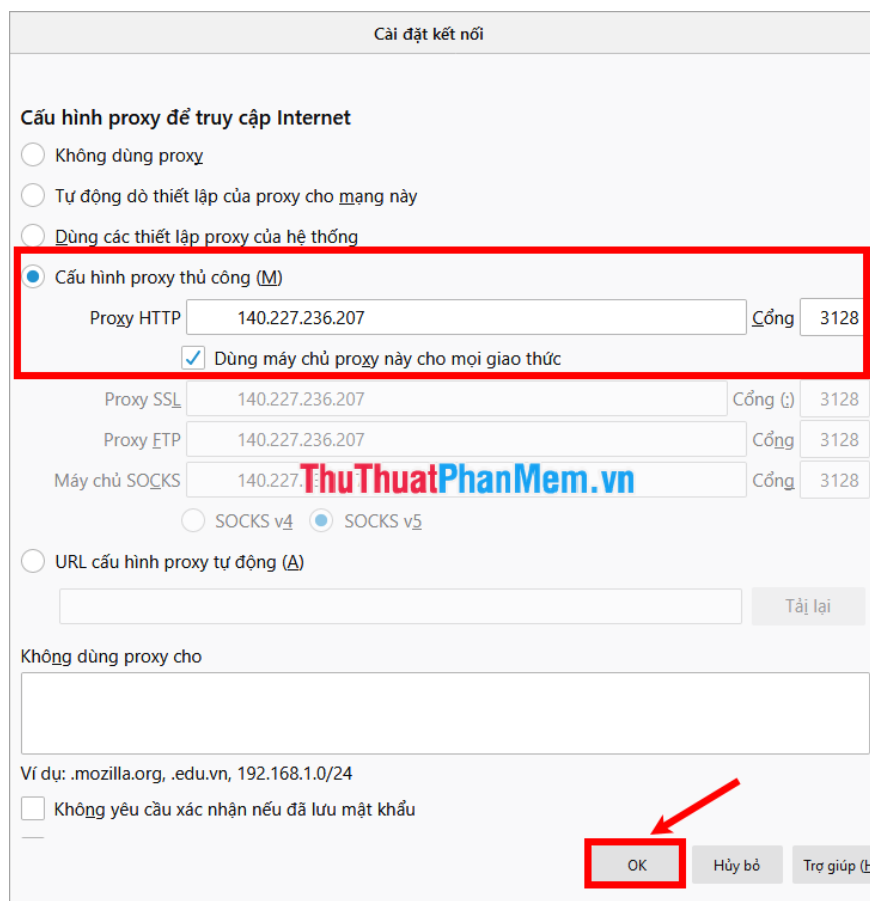

1. On FireFox, select the **Menu icon -> Options**.

1. In the **Options of FireFox** you drag the slider down and select **Settings (E)** in the **Network Settings**.

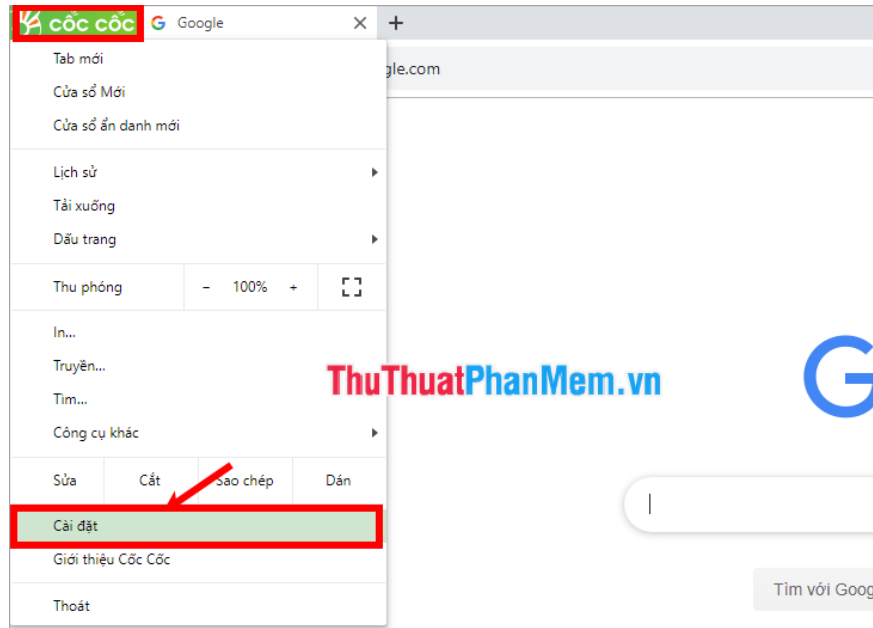

1. The Connection settings window appears, in the **Proxy configuration** section to access the Internet, select **Manual proxy configuration (M)**, then enter the **IP** and **Proxy port** that you have taken into the **HTTP Proxy** and **Port** boxes . Then tick Use this proxy server for all protocols and select **OK** .

So you have changed Proxy on FireFox.

**Chrome browser / Coc Coc**

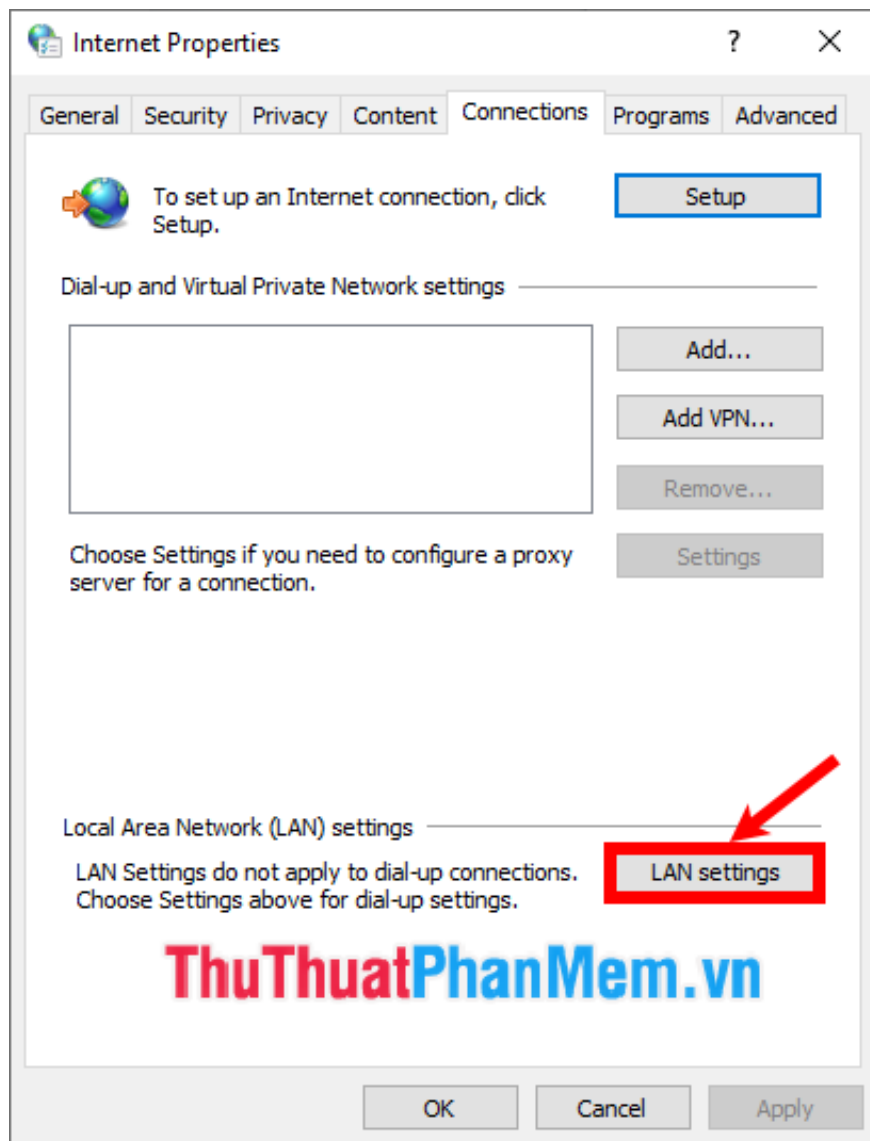

1. Select **Customize and control Coc Coc (or customize and control Chrome ) -> Settings.**

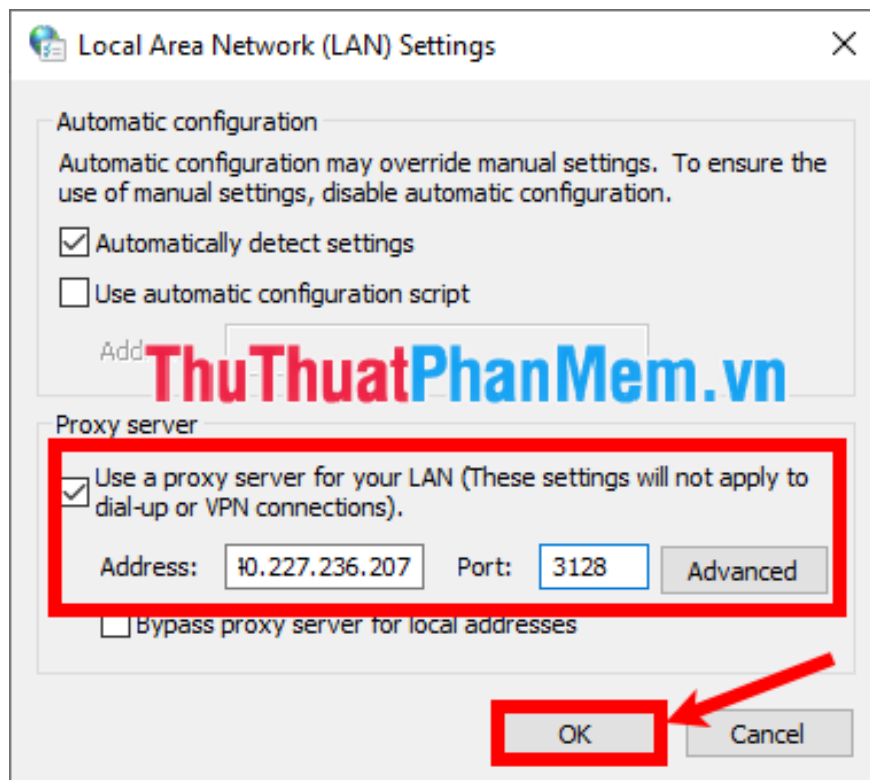

1. In the **Settings** section, scroll down to the **System** section and select **Open proxy settings** .

1. **Internet Properties** window appears , in the **Connections** tab , select **LAN settings** .

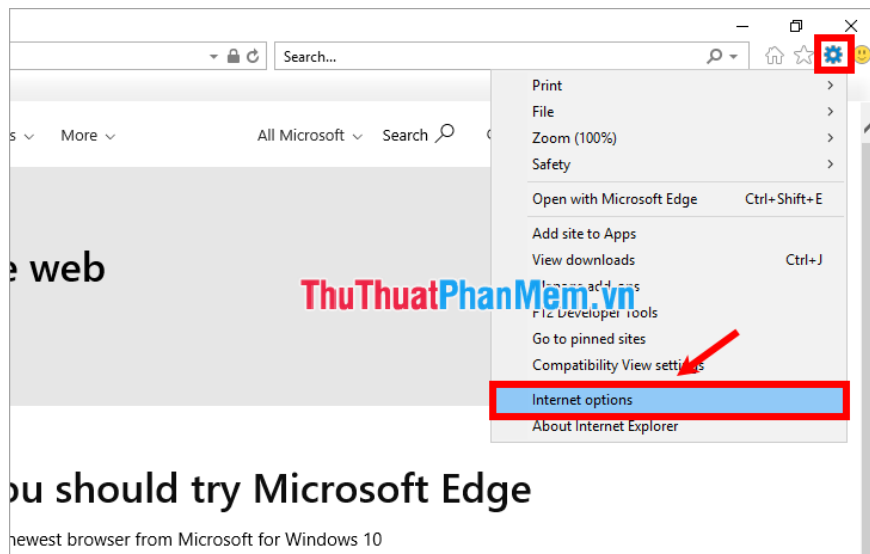

1. In the **Local Area Network (LAN) settings** window, check the box **Use a proxy server for your LAN** and enter the address ( **Address** ) along with the **Port** port just taken at the Proxy provisioning page. Then select **OK** .

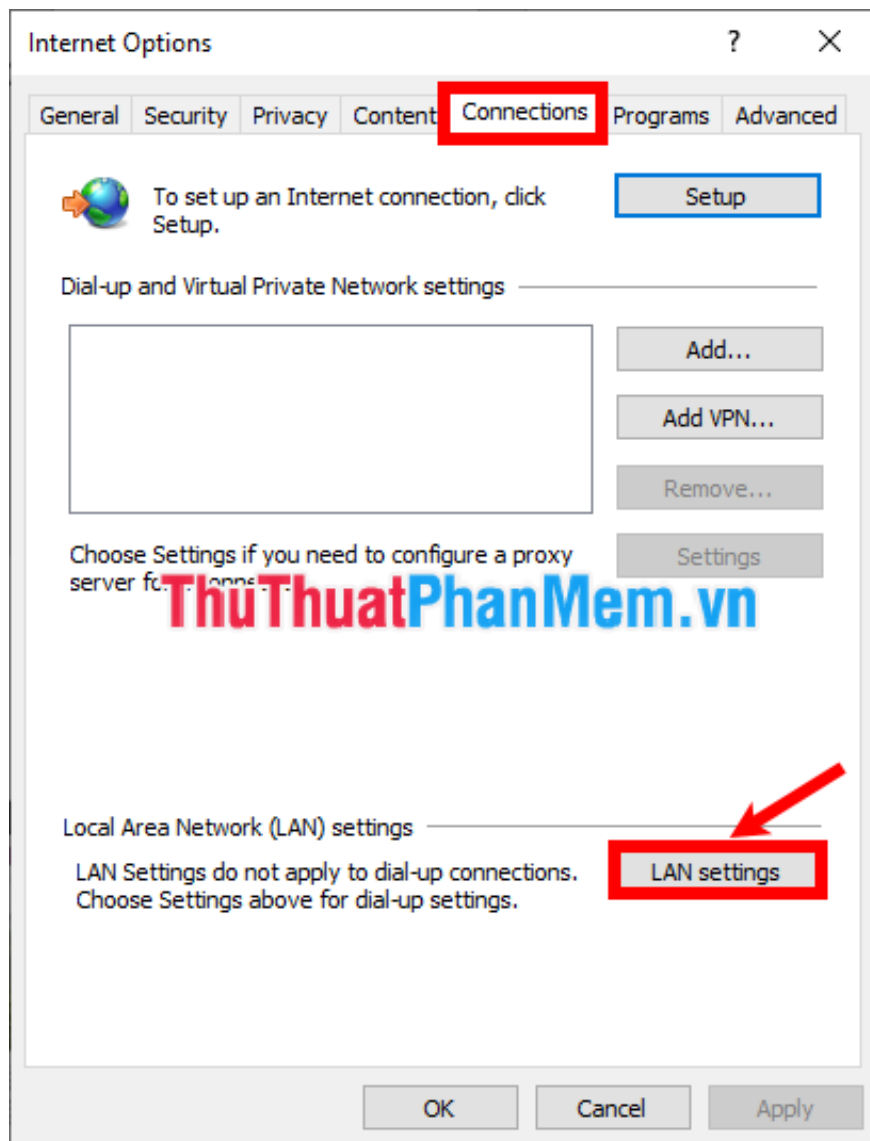

So you have changed Proxy on Coc Coc / Chrome.

## Internet Explorer browser

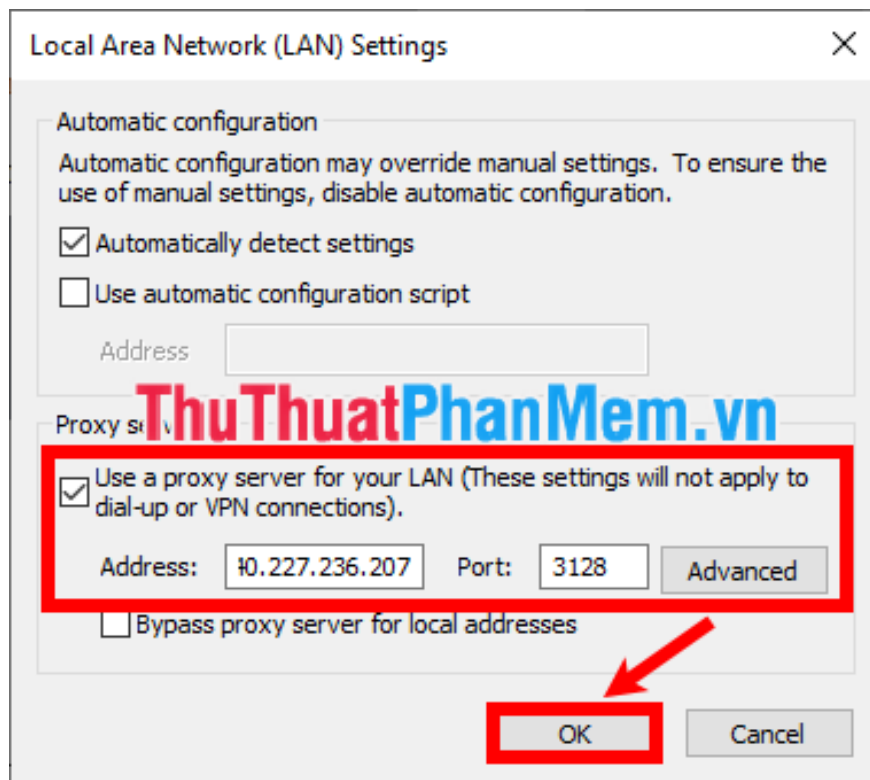

1. In Internet Explorer, select **Tools -> Internet Options** icon .

1. **Internet Options** window appears, select the **Connections** tab and select **LAN settings**.

1. Check **Use a proxy server for your LAN** and enter the **Address** and **Port** and select **OK** to close **Local Area Network (LAN) settings**.
