What is the Deep Web? Unknown secrets about the Deep Web. As a netizen, you also know how big the world on the Internet is, where you can access any information and knowledge. However, the truth is beyond what you are likely to seek

As a netizen, you also know how big the world on the Internet is, where you can access any information and knowledge. However, the truth is that besides the things you are likely to search for, there are also nooks and crannies on the Internet that you cannot imagine. Those addresses are called the Deep Web.

If you find this definition interesting, let us know what the Deep Web is and the unknown secrets about the Deep Web.

What is the Deep Web?

Deep Web, also known as submerged network, hidden web is the term used to refer to websites or content in the network world that are not bookmarked, indexed and cannot be found using normal search engines like Google, Bing.

Imagine the pages you look for everyday on news, services, products like Tiki, Vnexpress or Giaohangtietkiem that are surface websites. And the Deep web is the content hidden below and not public, only those with access can exchange with each other, including Messenger messages and Google mail, or secret forums.

Deep web depths are mainly used for illegal content.

Unknown secrets about the Deep web

Why is the Deep web popular?

When participating in the world of Deep web, you will become completely anonymous, nobody will know who you are, where you are. Therefore, no one can threaten you, everyone here will be equal. That is why many people take advantage of this to freely conduct black transactions, out of government control.

The nature of the Deep web

1. Deep web cannot be found by normal search engines like Google, Bing, Yahoo . Must use support tools to access.
2. This is the main place to carry out black transactions such as drugs, weapons, human organs, .
3. The place where illegal content, private documents on politics, religion and insider appear.
4. Place of operation of extremists, criminals, hackers.

The deep web contains mostly dark things and goes beyond the knowledge of people who have never been there. An example of a black transaction is a hacker attacks a system of an organization, steals confidential information, personal information and then sells it to another organization to carry out sabotage, edge pictures.

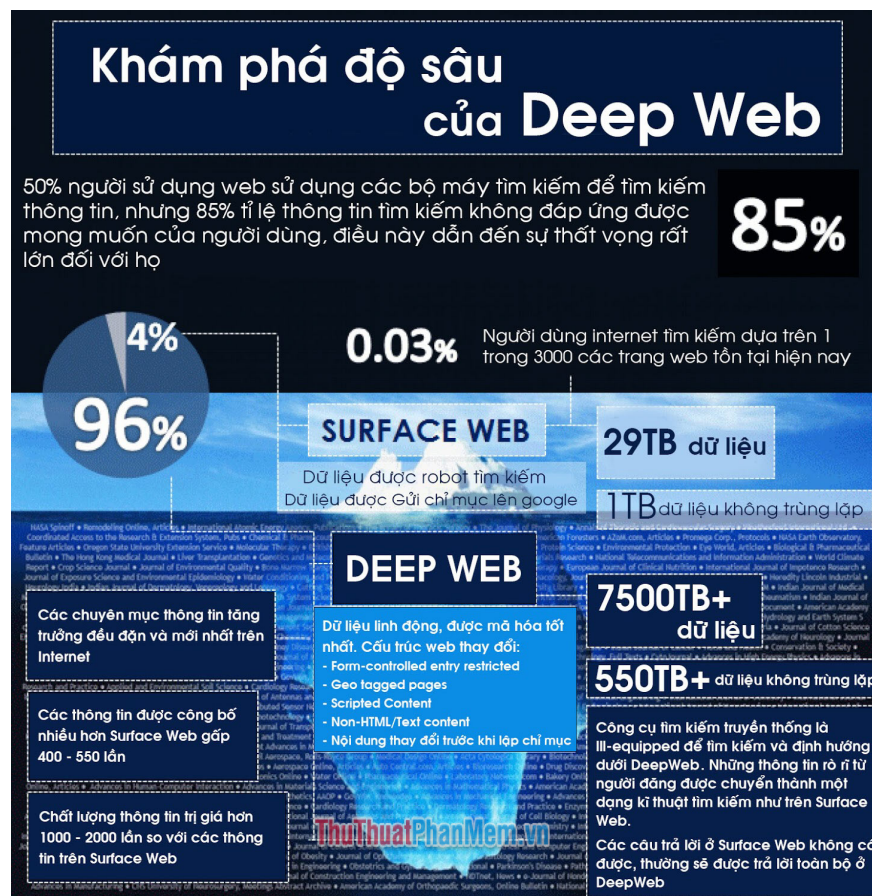

On the Deep web you can easily find extremist, thrilling, even crazy contents about sensitive matters, crimes, political and religious views. This information often haunts viewers for a long time. There are also secret information about the military, state organizations, mysteries about science as well as spirituality.

How to get to Deep web?

Currently there are many ways to access the deep web but the most popular is to use the TOR browser (The Onion Router).

Deep web levels

1. **Floating Web (Surface Web):** The websites we visit daily like Facebook, Lazada, Youtube . Reddit is only on this floor.
2. **Unrecognized Web (Bergie Web):** The last level that users can access in the most common way, recommends that you should stop here.
3. **Deep Web:** Need to access via proxy or Tor. Contains sensitive information, horror, hacker websites.
4. **Charter Web:** Contains drug content, weapons, human trafficking, or prohibited publications, black markets. It is also home to pornography, strange and horrible scientific experiments, which are unacceptable for being so inhuman.
5. **Marianas Web:** Appears on national secret documents, organizations, bizarre spiritual activities, secret conversations.
6. **Diversion:** There is not too much information about websites at this level, which is supposed to be a safety barrier for visitors before coming to the next level.
7. **The Fog:** An activity of network security experts and hackers, often taking action to attack and destroy each other. Access here will face the risk of very heavy computer viruses.
8. **The Primarch System:** The ultimate level of the Internet, not much is known about this level.

Above is the information you need to know about the Deep web. The website does not encourage you to access the Deep web because it contains the risk of causing great damage to you both physically and mentally.
