In the process of use, if you encounter the phenomenon of the Timer on the air conditioner blinking continuously, this is a signal that the air conditioner is experiencing some problems inside and needs to be checked for remedies. timely.

In the process of use, if you encounter the phenomenon of the Timer on the air conditioner blinking continuously, this is a signal that the air conditioner is experiencing some problems inside and needs to be checked for remedies. timely.

1. Air conditioner suddenly not cool? The cause and how to fix it
2. Why does air conditioner blow out heat?
3. Where to regulate water leakage in the cold?

## The cause of the air conditioner flashes continuously

The above phenomenon occurs when your family's air conditioner is used for a long time without maintenance. Specifically, the air conditioner will run for about 30 minutes and flash the lights again and not cool anymore.

The cause of the flickering air conditioner is determined to be related to the cooling fan failure or problems with the circuit, or the machine is short of gas or has a problem with Block. In addition, when you do not clean the air conditioner periodically, the dust will stick on the indoor unit, causing the cold air to not be able to blow out. This also makes the air conditioner light blinking.

# What to do to fix the flashing red light error on the air conditioner?

In the case of a lack of gas, you need to recharge the air conditioner to fix the flashing red light and help the air conditioner to be more efficient. It should be noted, if you have added gas but your air conditioner still cannot work normally, it is likely that the gas pipeline of the machine has leaked. Now you need to check and fix the leaks, thoroughly.

Regarding circuit fault or air conditioner block, if you have a lot of knowledge and understanding of air conditioner, you can absolutely check on the air condition of your family to overcome. However, the damage check and repair on the circuit board (control center for all operations of the air conditioner) and block is quite complicated, so the best way is to call a technician so they can quickly fix it.

## Some notes to fix flashing red light on air conditioner:

1. Contact a professional repairer instead of dealing with faulty circuits or air conditioning blocks yourself.
2. Do not arbitrarily disassemble the air conditioner to check the internal components as this will cause the device to experience other unintended damage.
3. Find genuine components to replace when there is a problem.
4. Cleaning and maintenance of regular air conditioning.
