

What is the Quiet mode of the air conditioner?

The air conditioner's Quiet mode is a feature capable of adjusting the engine speed to the lowest level to help reduce noise emitted when the air conditioner operates.

The air conditioner's Quiet mode is a feature capable of adjusting the engine speed to the lowest level to help reduce noise emitted when the air conditioner operates.

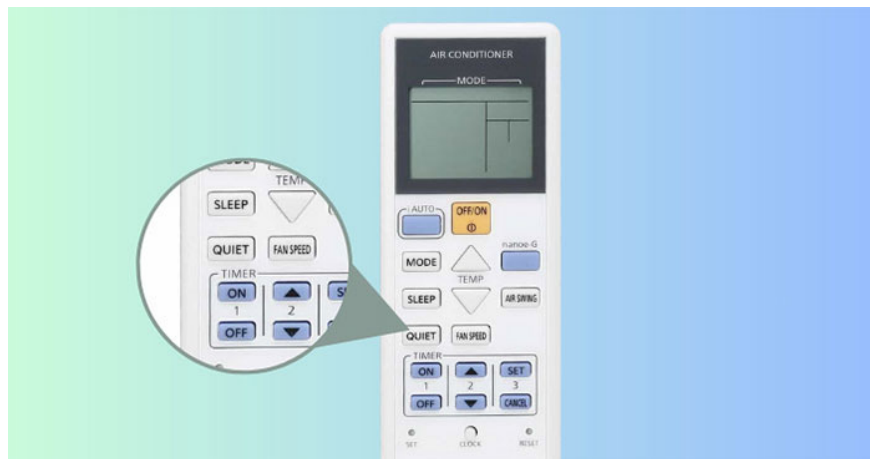

When Quiet mode is turned on, the air conditioner blows out gentle, pleasant airflow, operates smoothly, providing a quiet space for users while also helping to save energy more effectively.

Quiet mode is equipped on which air conditioner lines?

Most air conditioner brands today are equipped with Quiet mode such as: Daikin, Panasonic, LG, Toshiba, Samsung, TCL, Nagakawa,.

Models such as: 0.8HP, 1HP, 1.5HP, 2HP, or ceiling air conditioners, standing air conditioners, and Inverter air conditioners are also equipped with this mode.

How to turn on Quiet mode of air conditioner

After starting the air conditioner, press the Quiet button once on the remote to turn on Quiet mode and press the Quiet button again to turn off this mode.

Note:

In some air conditioner brands, the Quiet control button is designed in conjunction with the Powerful mode button.

In this case, you need to press the Powerful button until the screen displays the Quiet symbol. If you want to turn it off and switch to another feature, press that button again.

Note when using the air conditioner's Quiet mode

1. Do not select Quiet mode at the lowest level because it may reduce the machine's performance.
2. Make sure the filter is cleaned by cleaning the machine regularly, every 3 - 6 months, to ensure the air in the room is always fresh.
3. You should switch to Quiet mode after the air conditioner has been operating for 20 minutes to ensure that the room has reached the previously set temperature, avoiding the situation where the air conditioner operates but is not cool.
4. Do not leave Quiet mode running for too long because it will affect the durability and longevity of the product.
