

What is USEC DataSafe ultra-secure USB produced by Vietnamese engineers?

USEC DataSafe ultra-secure USB storage device will ensure data theft or data encryption.

On April 17, the International Conference on Security and Network Security - Vietnam Security Summit 2019 was held in Hanoi with the theme: "Safety and network security in the journey change number".

In this event, Vietnam Cyber Security Joint Stock Company (VSEC) has officially announced the launch of the official version of the USEC DataSafe ultra-secure USB device (version 18).

This is a storage device produced by Vietnamese engineers and mastered the technology, USB super security. It is expected to be a device to enhance security and remove the worry of theft, data disclosure for businesses, organizations and users.

The representative of VSEC Company shared, 3 factors that this manufacturer desires to bring to users on USEC Datasafe super-secure USB device are: **Safe and reliable** ; **Convenient, easy to use** and **maximum security** .

Because it is a data storage device with security features with a numeric keypad. According to VSEC expert, USEC DataSafe ultra-secure USB will ensure absolute data theft or data encryption. Avoid spreading the virus when copying data between computers.

Like many other USB storage devices, USEC DataSafe version 18 ultra-secure USB has a compact but luxurious look. On the USB body you will have a locked numeric keypad, available on any device with USB 2.0, 3.0 ports,

Especially when taking out a computer, the automatic lock function will be activated and no one will be able to see what you have saved on the device without a password.

In case of loss, the data inside the USEC DataSafe is still absolutely safe by the Brute Force attack protection mechanism and will erase the data after 18 wrong password entries.

In addition, USB USEC DataSafe hardware is encoded on the entire device to help users feel secure when the data is absolutely safe. With dedicated communication management software, USEC DataSafe possesses a solid barrier that prevents viruses from invading.

What is special about the construction of this USEC DataSafe ultra-secure USB is the use of "military-standard" Sandisk memory chips. Coupled with a monolithic aluminum shell and toughened glass, the USB USEC DataSafe provides superior shock and impact resistance.

According to the latest information from VSEC, the 32GB black USEC DataSafe 18 USB device is priced at 2,145,000 VND / device. As for the red version of USEC DataSafe, there will be a price of VND 2,255,000 / device, slightly higher for the red version, the buyer will be guaranteed 1 for 1 for a period of 1 year.

Users can directly order VSEC Company's USEC DataSafe USB by contacting Zalo / Viber account **0902.262.686** or can order via the online shopping application Sendo or Vatgia.com website with the keyword USEC.

And after 2 months of launch, there have been many USB USEC DataSafe storage devices provided to customers and enterprises in many industries such as technology, insurance, banking, auditing - accounting, teachers. .

Previously, at the time of product launch, VSEC representatives also shared:

'With outstanding features of USEC DataSafe, we are confident our products meet strict security inspection standards. The whole process of research and assembly until the completion of products is owned by Vietnamese engineers, marking the birth of products made of Made in Vietnam '.
