

# What is Windows Security? The quickest way to disable Windows Security.

What is Windows Security? A guide on how to easily enable or disable Windows Security using settings, Defender Control, and the Start Menu taskbar.

Windows Security is a built-in suite of tools in the Windows operating system, designed to protect your computer from cyber threats and malware. It's not just an antivirus application, but a comprehensive security system. Let's explore the features and how to enable/disable Windows Security in Windows 11, 10, 8, 7, and other versions in the following article!

## What is Windows Security?

**Windows Security** is a standard antivirus program on Windows, and also a reliable friend that always protects your computer from potential threats. From the moment you activate Windows 10 for the first time, Windows Security will automatically run and create a solid layer of protection for your device.

Beyond simply scanning and removing malware, Windows Security also monitors and prevents potential security threats. It doesn't just ensure your computer is safe right now; through Windows Update, it continuously updates to ensure your device is always optimally protected.

Using a laptop that is compatible and optimized with Windows Security not only provides a smooth and stable user experience but also ensures that you have a robust security firewall protecting your personal information and important data. At the same time, the seamless integration between the laptop and antivirus software will give you the best convenience and performance in maintaining online safety. Below are some new laptop models you can consider:

## Benefits of Windows Security

Windows Security is your reliable protection tool, offering a wide range of benefits:

1. **Virus & threat protection:** Deeply analyzes the system, detects any undesirable signs of malware, and provides updates to respond promptly to any incidents.
2. **Account protection:** Manages accounts and provides secure access, allowing users to control access rights and settings.
3. **Firewall & network protection:** A protective barrier for your network, not only controlling but also monitoring all internet connections to prevent potential threats.
4. **App and browser control :** Ensures safety when using web browsers and applications by detecting and blocking malicious content.

5. **Device security:** Continuously check the security of your device, ensuring that security vulnerabilities are covered to prevent malware.
6. **Device performance & health monitoring:** Provides detailed information about the device's status, helping you keep your computer running at its best and ready to receive the latest updates.

## How to disable Windows Security on Windows

Disabling Windows Security on Windows 11 can compromise system security. However, if you want to temporarily disable it or have a specific reason, here are some quick ways to do so.

### Turn it off using Settings.

Here's how to disable Windows Security in Windows 11 and 10 using Settings:

**Step 1:** Start by going to **Settings** . Select **Privacy & Security** , and then select **Windows Security** .

**Step 2:** In the **Windows Security** window that appears, select **Virus & threat protection**.

**Step 3:** Next, select **Manage Settings**.

**Step 4:** In the **Real-time protection** section , turn off this function by moving the switch to the 'Off' position.

Performing these steps will temporarily disable Windows Security in Windows 11 and 10. However, remember that disabling this protection may create security risks for your system; only do this if you have an alternative security solution.

### Disable in Defender Control

To effectively disable Windows Security in Windows Defender, follow these steps:

**Step 1:** **Download Defender Control 2.0** from the link <https://www.sordum.org/downloads/?st-defender-control>. After downloading, right-click on the file and select 'Extract All.' to extract the file.

**Step 2:** Open the extracted folder, run the **dfControl.exe** file , enter the password 'sordum', and press OK.

**Step 3:** In the software interface, you can choose between two options: '**Disable Windows Defender**' or '**Enable Windows Defender**' . It's simple and convenient to manage Defender as you wish.

### Disable it using antivirus software.

An important thing you may not know is that you should only have one antivirus software program installed on each device. Using two or more antivirus programs simultaneously increases the likelihood of conflicts and can cause numerous problems for your computer system.

Therefore, when you install another antivirus software, it will automatically disable Windows Security to avoid conflicts and ensure system stability.

## How to open Windows Security on Windows 11

There are many ways to open Windows Security on Windows 11, 10, 8, etc., through settings, the Start Menu, or the taskbar. You can follow these detailed instructions:

## Open with Settings

**Step 1:** Press the **Windows + I** key combination to open **Settings** .

**Step 2:** Select **Privacy & Security** and then select **Windows Security** .

**Step 3:** In the new window that appears, select **Open Windows Security** .

By following these simple steps on how to open Windows Security in Windows 11 and 10 via Settings, you can quickly access the interface to manage and adjust system security options conveniently.

## Open from Start Menu

**Step 1:** Open the **Start** menu .

**Step 2:** Find and select **Windows Security from the All Apps** list .

**Step 3:** In the new window that opens, change the **Windows Security** settings .

With the above instructions on how to open **Windows Security** using **the Start Menu** , you can easily access and manage security on Windows 11, Windows 10, and Windows 8 to protect and maintain the safety of your system.

## Open from the taskbar

**Step 1:** Open the notification area by clicking the upward-pointing arrow icon in the corner of **the Taskbar** . If available, click directly on the **Windows Security icon**.

**Step 2:** If available, click directly on the **Windows Security** icon .

**Step 3:** In the newly opened window, select **Virus & threat protection**. Select **Manage settings** . **Then, toggle the Real-time protection** switch to enable **Windows Security** .

In summary, the above details the content of Windows Security and instructions on how to quickly turn the security wall on and off on your PC or laptop running Windows 11, 10, 8, etc., using keyboard shortcuts or adjusting system settings. This is a built-in tool in the Windows operating system that helps protect your computer from cyber threats and viruses.
