

What kind of creature is the real life Pokemon in Gia Lai?

Fever game Pokemon Go is storming in Vietnam, making young people race to the street to hunt animals. Unexpectedly, when a young man in Ho Chi Minh City caught a strange yellow creature with four tentacles bristling like barbed wire that is thought to be very similar to real life Pokemon.

The fever of **Pokemon Go game** is " *storming* " in Vietnam, making young people race to the street to hunt animals. Unexpectedly, when a young man in Ho Chi Minh City caught a strange yellow creature with four tentacles bristling like barbed wire that is thought to be very similar to real life Pokemon.

The real life Pokemon that Mr. Dien has found for a long time .

The person who discovered the real picture of the Pokemon was Mai An Dien, a banker living in Gia Lai. Mr. Dien said, he discovered this strange creature 3-4 years ago at Dak Po District Hospital, where his wife worked. Amazed at the strange-shaped creature, he sent a question to the court telling the experts to answer his questions.

From shape and color, many readers claim that this is the **night tiger butterfly** , also known as the **hairy caterpillar**, whose scientific name is **Cretonotos Gangis** . This species usually lives in Southeast Asia as well as some other places in Australia.

Night tiger butterflies have white wings, the front wings are brown with bold stripes alternating, the belly is red or yellow. 4cm wide wingspan. In particular, they have genitals or **musk parts** called **coremata, which are**

composed of four **terrifyingly** shaped hemp tentacles.

This part emits pheromones to attract female butterflies. The size of the large, small genitalia depends on the diet when they are still caterpillars.

In fact, this strange creature is a moth species distributed in Southeast Asia.

Night tiger butterflies have 4 musky tentacles that look very horror.

This feathered tentacle works to release hormones that release your partner's hearing.
