

What special skills does Pet Pumpkin in Free Fire have?

The Free Fire OB24 update will be released on September 26, 2020, bringing many new features to the game, including new characters and a new companion. This article summarizes information about the Pumpkin Pet in Free Fire and its special skills.

Before officially releasing new features in the final version, developers put them on test servers for players to test and report any bugs or glitches to the publisher so they can fix them.

Pumpkin Free Fire Companion - The new pumpkin pet

The companion system was introduced to Free Fire in the January 22, 2019 update, allowing characters to bring a companion with them into battle. Subsequent updates have introduced new companions, and now, the OB24 update is bringing the Pumpkin companion to Free Fire.

This new companion looks like a pumpkin, seemingly a special pet for the upcoming Halloween. With its unique appearance, this companion attracts attention and looks really cool on the battlefield. It's not a real-life pet like Kitty or Simba.

This new Pet Pumpkin in Free Fire will be coming to the Battle Royale game in the upcoming OB24 update, scheduled for release on September 26th. Like most other companions, it will also have a special ability.

Pumpkin's special skill is reducing the cooldown of your character's active abilities. The higher the support's level, the lower the character's cooldown, allowing you to use this skill more frequently.

- For example: If you're using the character DJ Alok, who has a skill called "Life Melody" with a cooldown of less than 4 or 5 seconds, you'll have a significant advantage over other players.

Additionally, it will make many characters more useful. For example, some characters with incredibly powerful skills are still underrated due to their long cooldowns. But after the Pumpkin pet is introduced to the game, they will be valued more highly.
