## 1. How do I know if the TV screen gets too hot?

It will be difficult for you to determine exactly what temperature your home screen is and what temperature is unstable, because you are not a professional TV repairer. But, fortunately, there is a way to help you guess the state of the television.

Very simply, you just need to put your hand on the screen, if you feel the TV screen is warm and can hold your hand there for more than 10 seconds without feeling uncomfortable, the TV temperature is at a reasonable level, not worrying very. Conversely, just a few seconds after you put your hands on the TV you have seen the heat, surely the TV has a problem. Now, try to refer to the steps below to fix.

## 2. Fix hot TV screen error

**Do not leave the TV in a secret place or cover the towel immediately after using it:**

As mentioned above, active TV will generate heat so if you put the TV in a secret space, close to the wall, the screen of the hot TV is understandable. The most reasonable position for a television is in a high, well-ventilated place, not near direct sunlight. Besides, you should not cover the towel as soon as you have finished using the television, let it take about 10 to 15 minutes for the television to cool completely before using the cover.

**In order for the TV to take time off:**

When the television has to operate at full capacity for many consecutive hours, it's not just the screen, even the television is hot. So, if you find the TV screen too hot, you turn off the television, unplug the power cord and leave the TV to rest for 4 hours.

**Check the heat exit slot of the TV to see if there are strange objects:**

You check to see if the gap of the TV is stuck with something strange, if a strange object is detected, quickly take it out carefully. For objects that are deeply stuck, you should ask a TV repairer to avoid an unfortunate damage.

**Do not leave the TV screen too bright:**

Leaving the TV screen too bright not only affects the eyes but it can also heat up the TV screen. Of course, not all TV models are hot on the screen when lighting, this depends on the screen panel. However, when combined with watching TV for long periods of time, it can also make the screen unusually hot. Ideally, you should only adjust the TV brightness at 40% to 60% of the maximum, while ensuring comfort when looking back to ensure the life of the TV.

Above is the cause as well as how to overcome the phenomenon of hot TV screen. In case you have tried all the above but the TV is still unusually hot, it's time to bring your TV to reputable centers to fix.
