

What to use to clean laptop screen? The most standard way to clean laptop!

Is your laptop cleaning method correct? What is the best way to clean the laptop screen? Check out the article with HACOM!

Have you ever wondered: what is the most accurate way **to clean a laptop screen** ? **Let's find out the most correct and safest ways to clean a laptop with TipsMake through this article!**

What should I use to clean my laptop screen?

Although many people ignore it, cleaning **the laptop screen with what** is very important in protecting and maintaining the life of the screen. There are 3 popular options that you should choose to clean the laptop screen:

Clean laptop screen with microfiber cloth

This type of cloth is the most commonly used to clean laptop screens because it does not leave any lint on the screen and also prevents the screen from being scratched. You can easily buy this type of cloth at supermarkets, grocery stores, or in cheap laptop cleaning kits.

When wiping the screen with a microfiber cloth, you should wipe in a certain direction so that dirt flows away and reaches the corners of the screen. Use moderate force, avoid pressing too hard which can damage the panel or hinges.

Wipe with microfiber cloth combined with screen cleaning solution

Laptop cleaning kits usually come with a bottle of specialized cleaning solution. You can combine this solution with a microfiber cloth to clean the laptop screen when there are stubborn stains that are difficult to remove with a regular cloth. You should also spray the solution onto the cloth and then wipe instead of spraying directly onto the screen.

You should clean your laptop screen with a soft cloth and a specialized cleaning solution.

What to use to clean laptop screen? Sponge is also a good choice

If you don't have a microfiber cloth handy, a sponge can also be a good alternative for cleaning your laptop screen. Using a sponge to clean will require a little water, so you should wring the sponge dry before wiping, to avoid letting water run off the screen and leak into the internal components.

What should not be used to clean laptop screens?

There are a few materials you should remember not to use to clean your laptop screen such as:

1. **Rough towels:** Towels that are too rough when wiping can create scratches on the screen, affecting display quality.
2. **Sandpaper:** Sandpaper is a great tool to remove stubborn stains, but absolutely do not use it on laptop screens, it will destroy your screen in an extremely cruel way.
3. **Toothbrush:** Some toothbrushes with hard bristles can also damage and scratch your screen.
4. **Tissues:** Tissues are very convenient, but if you use them to clean the screen, the paper dust will most likely stick to the screen, making the situation worse.
5. **Soap:** Using soap will easily cause soapy water to flow into the components, you should only wipe the device with a damp cloth or a specialized cleaning solution. Some types of soap also contain many impurities, which can damage the screen.

Do not wipe laptop screen with tissue paper

Notes when cleaning laptop

In addition to knowing **what to use to clean your laptop screen** , you should also keep in mind a few things:

1. **Turn off:** Before you begin cleaning your screen, turn off your laptop completely and disconnect it from the power source.
2. **Wipe gently:** Wipe the screen using gentle, light pressure. Do not apply too much pressure, as this may damage the screen or create uneven light spots.
3. **Avoid using detergents:** Do not use detergents or harsh cleaning agents to clean the screen, as they may damage the protective layer of the screen.
4. **Do not use water directly:** Do not spray or pour water or other liquids directly onto the screen. If water is needed, dampen a cloth and wipe gently.
5. **Wash your hands before cleaning:** Always wash your hands thoroughly before cleaning your laptop to avoid transferring dirt and oil from your hands to the screen.
6. **Limit touching the screen:** Avoid touching the screen too much, as fingerprints and dust can desensitize and make the screen difficult to see.
7. **Regular cleaning:** You should clean your laptop screen regularly, at least once a week, to keep it clean and protected from dust build-up.
8. **Keyboard Cleaning:** If cleaning the screen involves cleaning the keyboard, be sure to turn off the laptop and use a can of compressed air or a light brush to remove dust and debris from the keys before cleaning the screen.

Cleaning your laptop properly helps maintain its lifespan better.
