

What's new about the Ambient OS from Android parents?

The Ambient OS is a new operating system installed on Essential Home that is produced by Android's father Andy Rubin, which helps to connect all smart devices in the family.

Recently, Andy Rubin, an Android operating system inventor, has released Essential Phone smartphone, with many unique and interesting designs. Especially the smart speaker with Essential Home round screen. And this speaker runs the Ambient OS.

Essential hardware company, the Ambient OS, will blow a new breeze into the field of connecting smart devices in the home. The Ambient OS is able to understand the physical layout and smart devices present in each house. From there connecting devices together makes it easier for users to control.

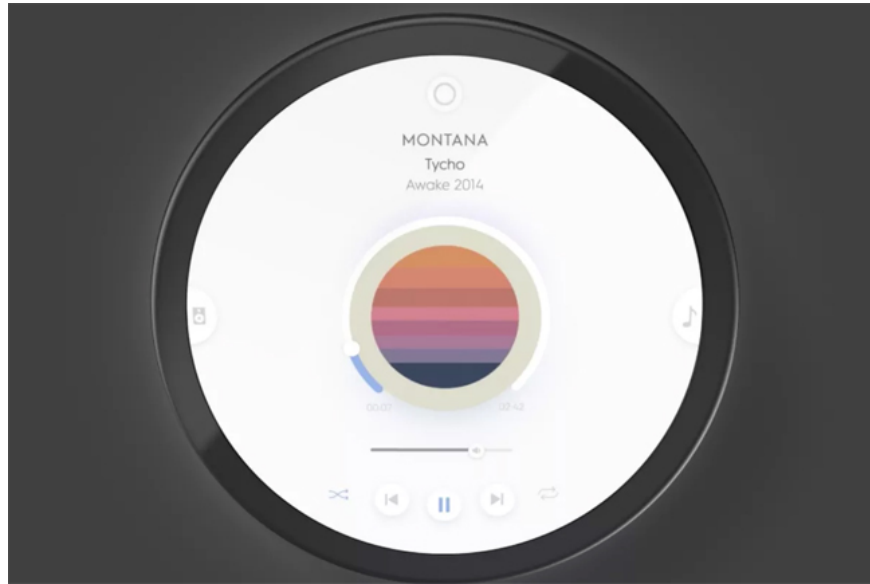

The Ambient OS has a fairly simple interface, used on Essential Home circular smart speakers.

The Ambient OS has the ability to combine devices together to create smart home control applications. For example, you can control the lights to blink automatically when the timer stops working.

The general mechanism of action is to get Essential Home to run the Ambient OS as a hub, thereby creating a common unity with other devices. This operating system will handle devices that connect through the local network, rather than performing direct interaction with the cloud APIs. The data will be stored on the server by

the Ambient OS when there is a network connection. Users will not need to worry about security, because the new operating system will protect the data and privacy of users.

Essential said the Ambient OS will control all smart devices in the home, offering appropriate action options for each device in the smart home, allowing users to choose from. Select the execution commands for the Ambient OS to perform on that device.

The launch of Essential Phone comes with the use of the Essential Home Ambient OS, which has made this smartphone stand out. Currently, Smart Home smart system is becoming a new race for many technology companies, then operating systems like the latest Ambient OS or previously SmartThing platform, Works With Nest will become an important pedal. important for the future development of Smart Home in the world.
