

What's new in Bphone A60: Unique design, released later this year

So what's new with Bphone A60? When will Bphone A60 be released? How much does Bphone A60 cost? Let's summarize the information about Bphone A60 through the article below!

After a long absence from the smartphone market, Nguyen Tu Quang recently revealed that the company will launch a new smartphone, Bphone A60, by the end of this year. So what's new with Bphone A60? When will Bphone A60 be released? How much does Bphone A60 cost? Let's summarize the information about Bphone A60 through the article below!

Bphone A60 will not be produced in Vietnam (updated: October 30)

During an online exchange on October 29, BKAV CEO confirmed that the company will switch to a new production method to reduce product prices and attract more users. New Bphone models including Bphone A60 will not be designed by the company itself, but ordered from an original equipment manufacturer. Bkav writes software and imports hardware assemblies for assembly in Vietnam.

If the above information is true, I think the upcoming Bphone A Series will no longer have a personality design like the B series but follow the trend of the market, such as a punch-hole camera. In addition, the head of BKAV also said that this model will be for general users who need a powerful configuration device at a good price.

Personally, I think this move of BKAV is also relatively understandable because hiring ODM manufacturers is quite common nowadays, especially with big brands. Samsung , OPPO or Xiaomi have a large percentage of mid-range and low-cost devices using the same original equipment manufacturer. However, the disadvantage of this method is that many of the machines on the market have almost the same design.

Even so, Bphone lovers don't have to worry too much because BKAV will still launch new versions of the 'Made in Vietnam' standard B Series next year with differences such as bottomless design, support waterproof support and some unique features. Let's wait and see together!

Bphone A60 has the same design as its B Series brothers

At the present time, the images of the Bphone A60 are still very few and we still have to wait a while before there are leaked images of the device. But as I predict, Bphone A60 will have the same design as the brothers Bphone B Series. Specifically, Bphone A60 will have a youthful design with a minimally designed back with the Bphone logo in the middle and a square camera cluster placed on the upper right.

The front of the device will continue to bring Bphone's style with thin screen borders and no chin. However, the upper border of the device will be quite thick to accommodate the selfie camera, according to many callers, this is the typical design of Bphone products in general.

Maybe this design is still very beautiful and youthful, suitable for today's active young people. But I still hope Bphone will have a few improvements so that the rear camera does not protrude too much from the back so that the device looks better and does not affect the user experience when placing the device on a flat surface like a table. . In addition, the reuse of the old design will help Bphone A60 have a more comfortable price.

When will Bphone A60 be released? How much does Bphone A60 cost?

According to Mr. Nguyen Tu Quang, Bphone A60 is expected to be launched by the end of this year, specifically in December along with many other products such as Bphone A40, Bphone A50 and Bphone A85 5G. I hope this information is true so that we will soon welcome Made In Vietnam phones and can buy one to celebrate this spring.

Currently, I still do not have any information about the specific selling price of Bphone A60. But according to leaked information about Bphone A60 will be a cheap mid-range phone, I boldly guess that the device will cost about 6 million VND when sold. If the machine has a good configuration, I think this price is reasonable for a Vietnamese brand product
