

What's special about Windows 10 April Update update?

Microsoft's upcoming Windows 10 Redstone 4 update may be called April Update. As expected, it will be released by Microsoft this week with many new features, much improved interface and security for the operating system.

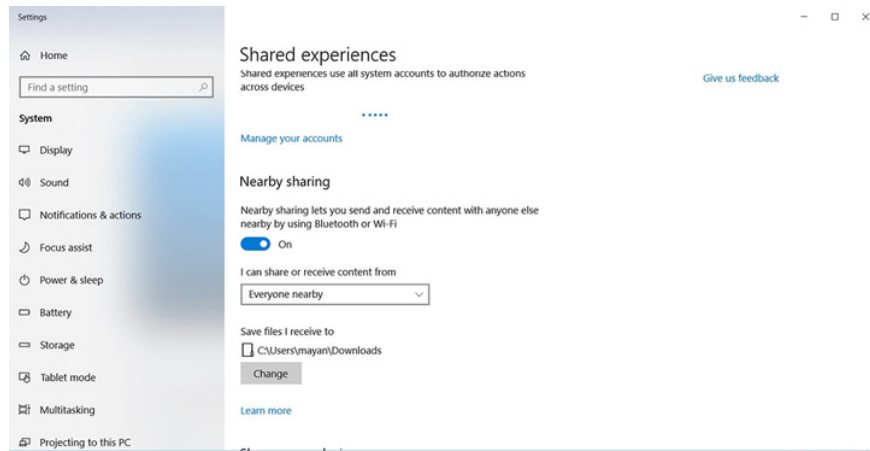

Microsoft's upcoming Windows 10 Redstone 4 update may be called April Update. As expected, it will be released by Microsoft this week with many new features, much improved interface and security for the operating system. Let's learn about the new features that will be available in this big update.

Windows Timeline

The Windows Timeline feature allows users to see all the applications they have opened on different devices for a certain period of time. At the same time, they can also reopen the app itself and continue to complete what is in progress.

Nearby share

Nearby Share is a feature that helps share data between Windows 10. Nearby share devices that are only available when both devices send and receive updates to Windows 10 Redstone 4 or later. Currently, this feature only supports sending and receiving data via Bluetooth. In the next updates, this feature will support data sharing via Wi-Fi method.

In addition to data, Nearby share also supports sharing links (links) on Microsoft Edge between Windows 10 devices.

Fluent Design

Microsoft has been applying Fluent Design - a nice and modern design language in major Windows 10 updates. And in Windows 10 April Update, the significantly improved Fluent Design helps improve display.
