

Where to buy heaters at a good price?

Cold weather like this affects the health of people, especially children and the elderly. Therefore, the heating equipment is extremely necessary, so choose where to buy good and reputable heaters?

Heating equipment is the hottest product on the market today, especially this winter. There are many types of heating products such as oil heaters, heating fans, electric blankets, bags, etc. Where do you buy your heating products? Which type of heating device to choose? You can refer to the article below to buy reliable and genuine heating.

Heating devices are preferred for use

How important is heating in the winter?

The weather gets colder and respiratory diseases are easier to develop, as well as people's resistance is somewhat reduced due to changes in weather. Especially in the winter bathing should be paid attention, especially for the elderly, young children or those with weak physical condition. If not careful, bathing in cold weather can lead to colds and even strokes. Therefore, a bath heating or heating fan is absolutely necessary.

Next, oil heating fans are the most optimal measures in the cold winter days of your family. The most optimal uses that oil-heating fans bring to your surprise, bringing the typical fast-heating technique that does not cause

dry skin and is extremely economical for users is suitable for families with small children.

Heating bag

It can be said that heating bags are heating devices with the simplest structure and operating mechanism and the cheapest price among heating devices. There are many types of heating bags on the market, but the most popular ones are Fashy, Thien Thanh and Huong Duong heating bags.

Sunflower general purpose packs are used for abdominal pain and postpartum

Heating bags have a very fast heating time, it only takes about 7 minutes to plug in, it can be used immediately. Hot holding time is quite long: if you leave the heater outside the blanket, the time to keep the heat is about 1.5 hours and if left in the blanket, it can be kept for about 5 hours. Heating bags come in many sizes that are suitable for many users and can be used to heat the limbs, back and shoulders.

Heating fan (heating lamp)

A fan is a type of heating lamp designed to look like a fan or a fan. There are three types of fan heaters: mayso heating fans, heating fans using halogen bulbs and heating fans using carbon bulbs.

Halogen heater fan (Halogen Heater):

Sunhouse SHD7015 halogen electric heating does not cause dry skin

Halogen fan is a fan of compact design, simple structure, high mobility, low price and low function. This type of heating fan uses halogen gas heating technology (compounds of argon and nitrogen), a simple structure consisting of two to five halogen bulbs mounted in plastic containers. When the light is on, electrical energy will be converted into heat energy transmitted to the environment.

Halogen heating is usually very cheap, only about VND 150,000 with three light bulbs and VND 300,000 with five light bulbs.

Mayso heating fan

This is the most classic and long-established heating fan. This type of heating design is also very simple with only a set of sewingso wires inside that are enough to heat quite well for users. Mayso heating is currently not popular and few people choose to buy even though the price is quite cheap, only from over 150,000 VND per unit.

Heating fans using carbon light bulbs (Electric carbon fiber heater):

Compared to two types of halogen heating and mayso heating, carbon heating has many advantages such as higher and special heat levels that do not emit light that affects your sleep. The price of heating carbon lamps is also higher than that of halogen heating, about 700,000 VND to nearly 2 million VND each. The carbon heater has the lowest power of 400W and the highest 1800W is equipped with some smart features such as self-disconnection if it falls, the operation indicator light, the timer .

Oil-Filled Radiator Heater (Oil-Filled Radiator Heater)

FujiE OFR4413 oil heater has 13 bars

Oil heaters are the most expensive and most expensive heating equipment available on the market today. Maybe you think the oil heater will run on oil and you will periodically have to change the oil or add oil to the tank? In fact, not so, oil heaters use a special oil called diathermic oil. Simply put, this is a good heat transfer oil and especially not consumed during use, so there is no need to replace or add. This means that when using an oil heater, you don't need to care about the condition of the oil inside the heater and replace it.

The operating principle of an oil heater is that when the machine is operating, the heating plates will be heated and heat transferred through the oil to the outside environment so it will not burn oxygen nor dry the skin like other heating devices . When using an oil heater you will feel the warmth coming out throughout the room and more comfortable than using mayso heating equipment, halogen or carbon.

The oil heater on the market has popular types from 9 to 13 heating rods with the highest capacity of 2900W and prices ranging from over 1 million to over 3 million depending on the heating bar and capacity. Some popular oil heater brands in the market include BlueStone, Fujie, Tiross .

Where to buy heating products reputable?

One of the units that provides genuine, electronic equipment and devices today is META.vn specialized in providing electronic products, household appliances, and the best winter heating equipment. The current.
