

# Which iPad should you buy?

When the iPad first launched in 2010, only one model was available. Now, there are five different iPad models to choose from, each with its own advantages and disadvantages to consider.

When the iPad first launched in 2010, only one model was available. Now, there are five different iPad models to choose from, each with its own advantages and disadvantages to consider.

So which iPad is right for you? How is the iPad Pro and iPad Air different? Is the iPad mini still a 'forgotten' consumer device from Apple?

Find out through the following article!

## Have you found the best iPad model for you yet?

1. iPad Air (Best option overall)
2. iPad Pro 12.9-inch (The best iPad for artists)
3. 11-inch iPad Pro (The most powerful iPad)
4. iPad (The best iPad for people with a tight budget)
5. iPad mini (Best mobile iPad Model)
6. Which iPad should I buy?

### **iPad Air (Best option overall)**

*Reference price: \$ 478.93 (VND 11,090,000)*

iPad Air is the tablet with Apple's biggest "appeal", the iPad Air is the perfect combination of value and power to fit the needs of most users. 5-inch and equipped with Bionic Apple A12 chips, this chip was first introduced with iPhone XS and XR by the end of 2018.

The use of the Apple A12 Bionic chip means that the iPad Air can handle most of the user-generated tasks, including high-powered digital audio workstations and workstations. The 10.5-inch screen is enough to provide clear benefits compared to small screens on smartphones, but not so big that it is difficult for users to use.

Apple Smart Keyboard compatibility is a great advantage, suitable for students or anyone who intends to use this tablet for writing purposes. In addition, the iPad Air also supports the first generation Apple Pencil, perfect for handwriting notes, PDF file annotations or quick sketching of something.

Besides, iPad Air also has some limitations. The chassis remains the same since this model first appeared in 2013. You can unlock it with the Touch ID fingerprint sensor which is somewhat outdated and the available storage capacity is only 256GB.

Anyone planning to buy an expensive iPad Pro should first consider iPad Air. The iPad Air's A12 Bionic chip is no match for other expensive products, but overall, the iPad Air still contains the incredible power behind its small appearance.

## **iPad Pro 12.9-inch (The best iPad for artists)**

*Reference price: \$ 849.99 (VND 19,678,000)*

It is impossible not to introduce the iPad Pro 12.9-inch to anyone who intends to use their tablet for artistic purposes (thanks to the big screen of this model). Combined with the second generation Apple Pencil, the iPad Pro is a reliable choice for artists who want to sketch, draw and refine ideas on tablets.

Apple Pencil is an optional additional tool, but it is also an essential option for anyone who wants to use a stylus with a tablet. When not in use, Apple Pencil can attach to the iPad frame to keep it safe. If you want to use this tablet for word processing, Smart Keyboard feature will be useful for you.

But for most other users, the iPad Pro's 12.9-inch size seems a bit big. It is very difficult to hold the iPad Pro with one hand comfortably, so this model is not ideal for doing things like surfing Facebook on a sofa. This 'bulky' size also makes it more difficult to place the iPad Pro in a small carry-on bag. One of the reasons consumers are switching to tablets is because of their superior mobility, so the iPad Pro's large 12.9-inch size is a factor to consider before decided to buy.

The 'brains' of all activities on the iPad Pro are the Apple12 A12X Bionic processor, which provides single core performance 35% faster and multi-core performance 90% faster than the A12 Bionic available in the iPad Air. In essence, this means the iPad Pro will be able to handle more intensive processes.

When buying an iPad Pro, you get a top user experience. The iPad Pro has been redesigned and has the smallest frame of any Apple tablet ever, as well as integrating biometric features Face ID, which first appeared on iPhone X.

## **11-inch iPad Pro (The most powerful iPad)**

*Reference price: \$ 824.99 (VND 19.1 million)*

The 11-inch iPad Pro can replace laptops when combined with Smart Keyboard Folio. Although the iOS operating system is not as strong as macOS or Windows, many of the available applications help offset this weakness. The iPad Pro is about the same price as a mid-range laptop, not including optional keyboard or stylus accessories.

Although each person's experience may be different, most people find that typing on Smart Keyboard Folio is an enjoyable experience. Even without sitting on a flat table, the keyboard feels comfortable and allows you to type at the same size as a MacBook, unlike the 9.7 Pro iPad case. -inch original Apple.

Moreover, the A12X Bionic chip inside the iPad Pro is also far superior to the laptop in terms of overall system power and performance. You have no problems editing 4K videos in iMovie, playing intensive 3D games or using two parallel applications as you like.

Finally, the reason that many people decide to choose the 11-inch iPad Pro instead of the iPad Air is more affordable than the user experience. iPad Pro has a redesigned frame and a small border. iPad Pro includes Face ID feature to unlock the tablet in a flash, instead of using fingerprints. The iPad Pro's storage capacity is also up to 1TB, much larger than the iPad Air's 256GB.

## **iPad (The best iPad for people with a tight budget)**

*Reference price: \$ 354 (10.500.000VND)*

Apple's most basic tablet is simply called the iPad. It is much cheaper than the iPad Air and even cheaper than the iPad mini. Powering the 9.7-inch screen is the Apple A10 Fusion chip, which first appeared in iPhone 7 in 2016.

Although not an advanced device, the iPad is still a tablet capable of handling everyday tasks well. iPad makes it easy for you to browse the web, use social networks, reply to emails, stream videos, music and even play most games.

Due to its limited power and relatively cheap price, the iPad may be the perfect tablet for children. This model is also a valuable educational tool, suitable for use in the classroom, as an e-book reader or companion 'companion' for learning or for notes with the keyboard. screen. No Smart Keyboard Folio on iPad, but this model is compatible with first generation Apple Pencil and third-party Bluetooth keyboard.

You can buy the iPad with Touch ID up to 128GB. The iPad can be the perfect 'companion' when you sip a cup of coffee, a helpful help tool in the kitchen to see recipes or control centers for smart houses to use. Apple HomeKit devices.

## **iPad mini (Best mobile iPad Model)**

*Reference price: \$ 549 (VND 12,710,000)*

In March 2019, Apple finally updated its iPad mini line (this product line has been largely forgotten since 2015). Updated tablets own the same Bionic A12 chip, found in iPad Air and iPhone XS. That means they have enough power to handle most applications and processes.

But the main reason for choosing the iPad mini is its form factor. With a 7.9-inch screen, the iPad mini can fit in a small handbag or a large pocket. The iPad mini's width and height are similar to many hardcover books, and therefore, this model also serves as an attractive e-book reader.

Apple's smallest tablet model has the same frame size as the 'predecessor', along with the Touch ID fingerprint scanner for unlocking and in-app purchases. iPad mini has a memory capacity of up to 256GB, but the compact size is still the most important thing that many users decide to buy this product.

## Which iPad should I buy?

Can be very attractive when considering iPad Pro and convince yourself that you need to choose the best Apple product, but to be honest, iPad Air is probably the best tablet on this list. Not only compatible with the first generation Apple Pencil and Smart Keyboard Folio, the value that iPad Air offers is also quite impressive.

Regardless of which model you choose to buy, make sure to take into account long-term use because Apple tablets tend to be used for a long time. Besides, one of the most important things to consider is how much storage space you need.

Don't make the mistake of buying an iPad with too little storage capacity, otherwise you'll be constantly in the 'battle' of free space on iOS.

Wish you find yourself a good product!
