

Which is the best 4G Wifi router today?

In remote areas, or remote areas without internet infrastructure, using a 4G sim to access the internet is the only solution. And to maintain a stable network speed, a 4G wifi transmitter plugged in is the best option!

Directly broadcasting wifi using your phone is never a feasible option because it consumes battery and can damage your device. Therefore, go to the store to consult a 4G wifi transmitter that plugs in to fully enjoy fast web surfing speed. If you don't know which type to choose, please refer to TipsMake's 4G wifi transmitters that plug in in this article.

What are the benefits of using a plugged-in wifi transmitter?

If in the past, wifi transmitters using 4G sim cards were usually compact devices using batteries to optimize mobility, suitable for backpackers or tourists, 4G wifi transmitters that plug into the power source will be more suitable for local users, living permanently in areas without Internet installation infrastructure. Wifi transmitters using 4G sim cards using conventional batteries can only be used for a short time of 2-3 hours, so when the battery runs out, we often have to recharge the battery before being able to use it again. With short-term use, there is not much impact, but if used for a long time instead of the Internet, this is not a suitable solution.

The 4G wifi transmitter that plugs in can maintain a stable wifi network 24/7 without worrying about charging. On the other hand, the 4G wifi transmitter that plugs in also provides a more stable network speed thanks to its structure with broadcasting antennas that are no different from traditional wifi transmitters. The only downside of the wifi transmitter that plugs in is that it cannot be used when moving to use in areas without electricity.

However, in essence, it is a wifi transmitter used for remote areas without internet, so these types of **wifi transmitters** are only suitable for fixed use.

4G wifi transmitter plug in criteria

Choosing a good quality technology device is not simple, you need to research carefully. A good 4G transmitter needs to meet the following criteria:

1. Network speed and frequency: Cat 4, Cat 6 and Cat 9. Minimum 4G LTE standard speed is 150Mbps.
2. The higher the battery capacity, the longer the usage time. You can buy a separate battery for easy replacement. The battery capacity is about 1500mAh or more and operates for about 6 hours or more for smooth gaming.
3. Number of visitors is an important criterion to meet the fun of playing games with teammates. Can connect at least 10 computers or more.
4. Products from reputable brands, with control applications, broadcast range.

TOP 4 best-selling 4G wifi routers 2022

TP-Link MR100 Wireless N300 4G Wifi Router

The 4G Wi-Fi hotspot is integrated with a SIM card slot. You can enjoy fast Wi-Fi on the 4G LTE network.

With the modern 4G LTE network you can enjoy downloads of up to 150 Mbps. Share your 4G LTE network with multiple Wi-Fi devices and enjoy smooth HD movies, fast file downloads.

The MR100 has been tested over many years to ensure universal compatibility with two state-of-the-art LTE antennas for seamless connectivity. Simply insert a micro SIM card and enjoy fast, stable Wi-Fi, whether you're at home or working remotely.

Easily share 3G/4G connection with multiple Wi-Fi devices, such as: phones, computers and laptops at the same time.

TP-Link Archer MR400 AC1200 4G wifi transmitter

TP-link Archer MR400 AC1200 4G wifi signal transmitter is a device that helps you use and share wifi with great experiences anytime, anywhere.

With the TP-link Archer MR400 AC1200 4G wifi transmitter, you will easily enjoy unprecedented convenience and flexibility.

Plus, set up the Archer MR400 in minutes with its intuitive web interface and the powerful Tether app that lets you manage network settings easily and quickly from any Android or iOS device.

TP-Link MR200 Wireless AC750 4G Wifi Router

With a built-in 4G Wi-Fi hotspot and SIM card slot, simply insert a SIM card and power on the Archer MR200. It's quick and easy to enjoy the speed and great experience that 4G LTE technology brings.

Archer MR200 supports 4G LTE network sharing with multiple connected devices while still being able to experience smooth HD video viewing, fast file downloads without interruption.

The Archer MR200 is the perfect solution for any situation, from simple home entertainment to remote work. Simply plug it in and you can leverage it to boost productivity in any environment.

TP-Link TL-MR6400 Wireless N300 Mbps 4G Router

Enjoying stable Wi-Fi speed of 4G LTE network technology is easier and faster than ever.

The TL-MR6400 can achieve download speeds of up to 150Mbps. Share your 4G LTE network faster than ever with multiple Wi-Fi devices while enjoying lag-free video streaming or file downloads.

TL-MR6400 quickly shares a 3G/4G connection with up to 32 Wi-Fi devices such as laptops and tablets. The LAN port provides fast internet speeds for wired devices such as desktop computers.

Conclude:

With the internet connection in residential areas, apartments with low speed or unable to pull the internet line, the best solution is to temporarily use a high-speed 4G wifi transmitter plugged in to use. Above, TipsMake has suggested to you the criteria for choosing a 4G wifi transmitter plugged in quickly and simply as well as the top 4 best-selling 4G wifi transmitters plugged in today. Hope you have made the best choice for yourself.
