

Which is the best brand color printer between: Canon, Brother and Epson?

Today's article will help you pocket your experience to choose the most suitable color printer brand.

Color printers are groundbreaking office equipment, bringing many benefits to people's lives, especially in the era of information technology industry is developing strongly today. However, to choose a good color printer, not everyone knows. Today's article will help you pocket your experience to choose the most suitable color printer brand.

I. The criteria to pay attention to when choosing to buy color printers

1. Identify the object using the color printer

Before choosing to buy a printer, you need to identify the user. Will the device be used in home, office, or business?

If you choose to use it for your family, the Brother color printer is better suited. They meet the needs of printing documents, photos or technical drawings and ensure stable quality with the need of not printing much.

If you buy a color printer for small offices, you should choose printers that are more professional, easy to use, suitable for everyone in the office.

Whereas in small and medium enterprises, the printer must require a large capacity to meet the needs of printing documents for employees in the enterprise at a fast pace. The choice of businesses is mainly high speed laser color printers.

2. Speed and quality of printed pages

The next important factor that users should consider when choosing to buy a color printer is the printing speed and the quality of the printed page.

Currently, manufacturers are actively improving product quality, so printers often have speeds of 15 - 35 pages / minute, quality and color images are also guaranteed.

3. Seamless engine

Machine assembly is the main factor determining machine life, printing paper thickness and paper jam phenomenon. The mechanical unit will often wear out after a time when the printer is used with high speed and high frequency, which leads to paper jam, which is difficult to repair. So users should pay attention to choose color printers with strong staging with higher quality paper although it will be quite annoying by making bigger noise.

4. DPI resolution

DPI is an important parameter, it is always clearly printed by manufacturers on printers. This is the number used to indicate the number of points that the printer can print on a square inch, meaning that the higher the DPI parameter, the sharper the printed image.

Most low-quality inkjet printers with DPI range from around 300 to 600 DPI while higher-end inkjet printers can accommodate up to 1,000 DPI. Laser printers and LED printers can give DPI ranges from about 600 to 2,000 DPI.

5. 2-sided printing capability

The 2-sided printing will help save paper, users can take advantage of both sides of paper, contributing significantly to environmental protection. Moreover, it also meets the high printing needs of users, avoiding having to wait too long to waste time, affecting work performance.

6. Product price

On the market today there are many color printers with designs as well as diverse prices, suitable for all customers. It is the fierce competition of printer brands whose products have just been guaranteed in quality and at reasonable prices.

If in the past, if you want to use a color printer, you have to spend a lot of money, so now, with only the amount of 500 - 600 thousand dong, people can also own a quality color printer. pretty good.

II. Which brand color printer should I choose?

Currently there are many big names in the market, along with the development of emerging manufacturers. However, as a wise consumer, you should choose reputable color printer brands.

Choose a color printer from a reputable brand, you not only get sharp print quality but also can easily repair or replace ink. Besides, these brands of color printers also bring attentive customer care, attractive promotions.

Here are 3 famous and quality color printer brands that you can easily choose before deciding to buy a device:
