

Why do you need a more desktop laptop?

Laptops have long surpassed computers to discuss sales by compact design, easy to move. However, there are some compelling reasons to keep your feet in front of the desktop.

Laptops have long surpassed computers to discuss sales by compact design, easy to move. However, there are some compelling reasons to keep your feet in front of the desktop.

First of all, it's **the price / performance ratio** of the device. Whether you're spending **300 USD or 3000 USD**, you'll get a computer with a powerful configuration commensurate with the money you spend if you don't care much about the mobility of the device. Usually, the price of a laptop is usually higher than that of a desktop computer.

Besides, you have more options when you intend to upgrade your desktop. Most laptops will allow you to easily add more RAM and hard disk. However, upgrading the graphics card or CPU can be easily done on the desktop. However, it is very difficult (often impossible) on a laptop. The price of components to upgrade a laptop is also more expensive than the desktop.

The advantage continues to belong to the **desktop** line when it comes to **repair problems** . According to technology experts, removing a desktop computer for testing is easier than a laptop. Without too many techniques, users can clean and replace damaged components. Meanwhile, the laptop repair needs high-tech people.

In addition, desktop computers have the advantage of serving office work, graphic design by large screens and full-size keyboards. With this device, users feel more comfortable working for a long time.

However, undeniable portability of laptops. With this device, users can work anywhere they want. This is an important factor contributing to the success of this device.

Besides, laptops also **consume less power** than desktops and take up less work space and **security is** also better than traditional desktops.
