

Why use copyrighted Windows?

If you just think simply, Win pirated saves you a cost you think is right but not enough. So what are the consequences of using pirated Win? Why should we use copyrighted Windows? Is Windows license better than Windows without copyright?

Normally when installing **Windows operating system**, you will go online to find a **ghost** version, the available installer or **download the Windows ISO file to create USB boot** and install it yourself. No matter how you install Windows, a lot of you still find ways to "crack" Windows later, use floating crack versions online, or hunt for free shared keys from forums.

Luckily, you can find a free key or a clean installer, unfortunately you can't activate Win and there are many consequences behind it. If you just think simply, Win pirated saves you a cost you think is right but not enough. So what are the consequences of using pirated Win? Why should we use copyrighted Windows? Is Windows license better than Windows without copyright? We will find the answers to these problems soon.

First of all, let's look at the three current operating systems in the world:

Windows is an operating system developed by Microsoft and licensed for commercial rights. Computer stores or computer manufacturers often have Windows licenses pre-installed to encourage customers to buy products, but usually only a limited-time license. In addition, users can purchase copyrighted Windows on the Microsoft website or DVD and install it on their computers.

Apple-developed **MacOS**, also has a commercial license and is primarily pre-installed on Apple computers, but you can buy a DVD and install it yourself or upgrade the macOS version automatically when there are sessions. new version.

Linux, an open-source operating system, the user community can install, use, and even modify the operating system's source code to create their own Linux distros at no cost. There are a lot of Linux distros, the number of Vietnamese users using this operating system is also quite large.

Windows has the largest market share compared to Mac OS and Linux

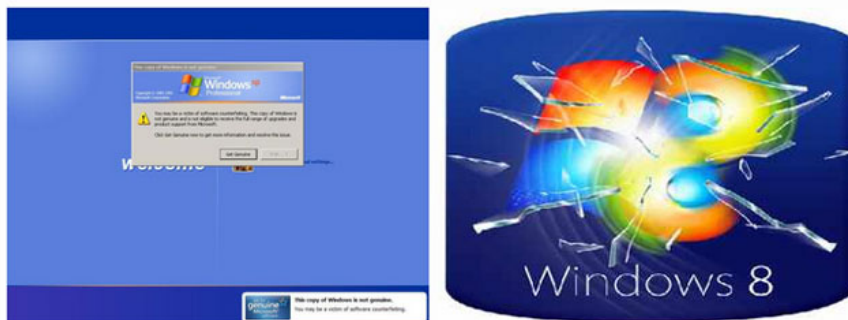

Although the market share of Linux operating systems and macOS has increased, it has not been able to push down the dominance of Windows. But despite being used most in the world, Windows is also the most pirated operating system. That's even more true in Vietnam, 10 computers have 7 Windows machines, but more than half of them are using Win crack, Win has no copyright. Why?

"Immediate" benefit when using Windows without copyright:

Although in Windows operating system, Microsoft has integrated **WGA** (*Windows Genuine Advantage*) feature - anti-piracy feature but with technology development and more and more hackers appear in the world " *crack* " "A Windows license is not difficult, even if the Windows version has just been released.

With a price of 4.1 million for Windows 10 Home in Vietnam market (the price up to August 20, 2018 on Windows Store), users can buy a decent SSD, upgrade RAM or install more cards Graphics for a better experience, instead of buying a downloadable version of Windows from the Internet. The biggest benefit for non-copyrighted Windows users obviously saves some money from licensing, ranging from 80 USD ~ 100 USD or more depending on the operating system version. In addition, because Windows versions are very soon cracked, users (*for not losing royalties*) can easily upgrade to use the latest versions. Assuming you are using a licensed version of Windows XP, you will definitely have to consider spending an extra amount to upgrade to **Windows 7** or **Windows 8** , but if you are using crack software, you will download one again. The crack of the latest Windows version to use without any concerns because it doesn't cost any more.

The use of " *crack* " is a financial advantage. Therefore, most people search and buy for themselves the Windows " *crack* " and Windows " *pirated* " installation discs with the serial keys provided by hackers. Although they know the danger, they still ignore risks and incalculable consequences.

WGA anti-piracy feature Risk of risk from "pirated" Windows use

Why should use Windows license?

1 / Minimizing safety and security issues

The Windows crack versions you download from the web can contain malware, viruses, trojans, spyware . without your knowledge. Even if you use the clean ISO version downloaded from Microsoft to install Windows, but then use the tool to crack it will still leave holes, backdoor that you can not see with the naked eye.

Pirated Windows users also often dare to update the operating system more because of the risk of being detected and cracked or having to install another pirated Windows version. These make the computer highly vulnerable, the operating system is not currently protected from Microsoft itself, does not receive the free Windows Defender updates, security holes regularly updated, patched, the firewall system is not used to block spyware, even Microsoft Office software such as Microsoft Excel, Access, Outlook can also be hacked by hackers. poison, steal information.

The development of the Internet in 2018 far surpassed the previous years 2010. Cybercrime, malware, malicious code, security holes are constantly being discovered with dense, serious levels. also increased. The value of data on personal information is also becoming increasingly important, as users connect everything in their lives with digital devices, from home, work and financial addresses to Biometric data. Security in technology has never been so hot.

You can think oh in my computer, nothing, all the pig movies, JAVs, hackers want to get it, you also give a little more "rare documents" for hackers to "turn" for. But the problem seems more serious. Malicious code installed on your computer, in addition to all activities you perform on your computer are at risk of being monitored, data can be stolen, destroyed, it can even turn your computer into a tool to Implementing intrigue, network attack at a larger scale. Not to mention that it is the employees' computers in the enterprise with lots of important work data stored on the computer.

Think about it and equip your computer with a copyrighted operating system to be assured of long-term use, protecting the important data you have. Saving data or losing data when infected with a virus will cost you more with buying a Windows license, not only is it not feasible, so remember " *prevention is better than cure* ".

Windows is "cracked" as "bait" for hackers

2 / Computer operation is stable, fewer errors

When you crack Windows, the original operating system file was modified, adding certain data and this will affect the stability of the operating system. Blue screen error, black screen error, loss of sound, suspended computer, . will occur frequently. You can get a key online, but being detected as a pirated key is only a matter of late. When detected as a pirated Windows, the desktop will turn black, no matter what wallpaper you have installed, then it will automatically turn off after a random amount of time (usually from 30 minutes to 1 hour), causing your work to be interrupted.

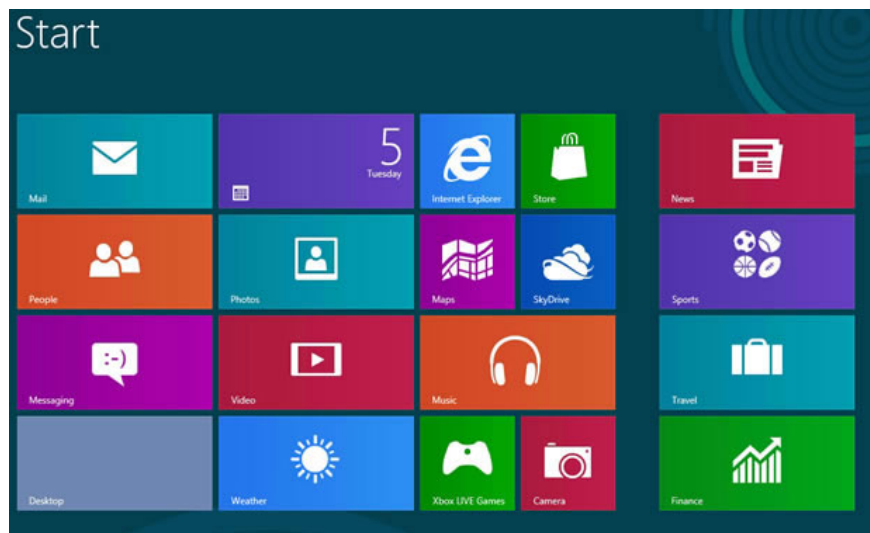

If you uphold the stability of your computer, using a copyrighted copy of Windows is necessary. It makes your work smoother, minimizes the risk of data loss due to an operating system error or constantly reinstalling

Windows.

With the highest version of Windows, currently Windows 10, it is updated regularly with new features, patches and security patches to help you get the best experience and protection. Microsoft will also back up the license key you entered with your Microsoft account, so you can reinstall Windows, replace the hard drive without losing your key, just log back in with your account, all the rest will be implemented by Microsoft on your behalf.

3 / Benefits are included

Buy copyrighted Windows you not only get every copyrighted Windows. Depending on each promotion, you can get other benefits from Microsoft such as free OneDriver capacity, Microsoft Office office suite or Office 365.

Useful applications on copyrighted Windows

4 / Safety and reputation of the business

The use of pirated operating systems can leak internal information and data, create vulnerabilities for hackers to attack the company's system, causing major economic losses. Therefore, large companies and corporations often equip their operating systems with 100% employees and they also require employees not to crack the operating system or any software on the computer.

Whether your business is eavesdropped, attacked or not is not always easy to detect. If the bad guys only have the purpose of quietly investigating the internal situation of the business, looking at the upcoming market strategies to launch a deal, you may never know. Unless they perform a direct attack like DDoS, crashing your system, it is already late to find a way to fix it. Not to mention, if you are a large enterprise that has been detected using pirated software, in addition to being fined hundreds of millions of dong (even billions of dong depending on the number of computers), it also harms the image and brand of companies, businesses.

5 / If you are a technology worker

If you like free, use Linux or buy Mac with the built-in macOS license. If you want to use Windows, buy a license (unless Microsoft decides to turn it into free software). Think about how much manpower and resources needed to create Windows? It is like you / your team / your company programming useful software, good games but blatantly copied without asking for a comment or paying a penny. What if everyone just waited for Microsoft to release a new version of Win to crack for use? Windows still exists today and is constantly improving, thanks to users who pay to buy copyright, so that it exists, so that Microsoft can continue to invest, improve it.

Not only copyrighted Windows but also get used to buying copyrighted software for free or use free solutions instead.

Can buy Windows license cheaper?

Although reading all of the above is also true, should buy copyrighted Windows but the price is too high to do? If only Microsoft sold cheaper, about VND 1,000,000, surely Vietnamese users would buy more.

There are several ways you can buy copyrighted Windows at a cheaper price than buy straight from Microsoft.

Buy laptops and computers with Windows license installed. When you buy a computer, the laptop will usually be preinstalled with Windows, but that is the version of Windows to try, after 30 or 90 days will expire and you must enter the key or reinstall another version of Windows to use. So when buying a laptop or computer, you should ask a counselor about laptops that are given copyrighted Windows for reference. Some carriers like Asus or Acer offer copyrighted Windows and you should buy at reputable addresses such as Mobile World, FPT Shop, Phuc Anh, . to be supported to install the copyright operating system. The downside of the pre-installed Windows licenses on this machine is that when you change the device, you may have to buy another copy of the copyrighted copy.

Hunt for discounts at stores selling computers, software, on Amazon, so that you can buy Windows license at a cheaper price or buy a machine and get more copyrighted Win.

Surface purchases available with Windows license.
