

Will Microsoft Edge new version be the real rival of Google Chrome? Maybe very much!

Last weekend, an early build of the new Edge browser version ran with Microsoft's Chromium kernel that leaked on many online technology forums, giving us a really detailed and clear view of the top. first about what Microsoft is nurturing on its 'strategic card'.

Last weekend, an early build of the new Microsoft Edge browser version ran with Google's Chromium kernel that leaked on many online technology forums, giving us a really detailed and clear view. first about what Microsoft is nurturing on its 'strategic card'. According to information released last year, Microsoft is building Edge from scratch using the open source Chromium project, but many of the experts' questions have not been answered by Microsoft at the time. there. Now, with a leaked build, we have a much better idea of ??what Microsoft has been doing, and will be doing it on Edge when the browser actually switches to the Chromium core, and feels The initial recognition of many experts is very positive, some even believe that Microsoft Edge will be the real rival of Google Chrome, whether this can happen or not, we will be together Find out later.

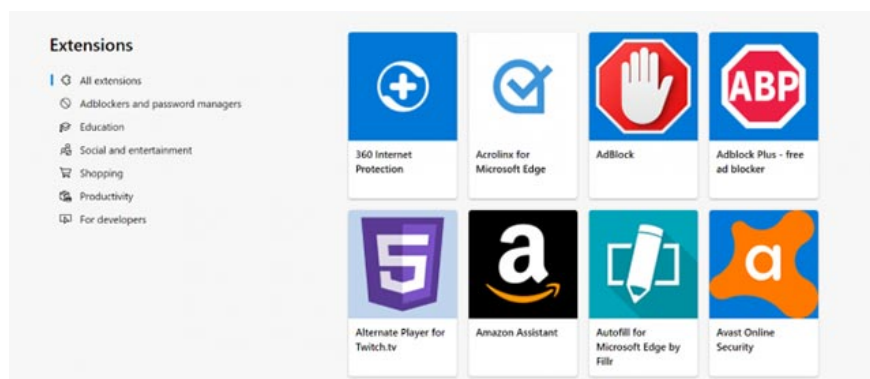

1. Experience Microsoft Edge with Chromium, nice interface, fast loading speed, better RAM than Chrome

Microsoft Edge

1. About the new Microsoft Edge version
2. Stability will make the brand for the new Microsoft Edge version
3. A promising start for Microsoft

About the new Microsoft Edge version

It can be confirmed that this new version of Edge is a complete reconstruction of the browser itself (the old version), codenamed "Anaheim". Specifically, it is no longer based on Chakra core and is no longer using Microsoft's own rendering engine called the EdgeHTML as before. The new version of Microsoft Edge now uses the same rendering engine as found in Chrome, meaning that Edge will now be able to handle sites like YouTube and TweetDeck in a neat, fast way. , without encountering any delay or performance issues. In addition, Microsoft has introduced management measures to make Anaheim 'consume less system resources, using less RAM than the old Edge version and even Chrome.

1. Leaks Microsoft's new Chromium Edge download link

Unfortunately, the first (leaked) build does not own all the features Microsoft has planned for Anaheim, but it gives us a better overview of how it works. This browser, at least until the present time. Accordingly, the new Microsoft Edge user interface will become neat, 'clean', and especially more user-friendly, although there is currently a lack of Fluent Design effects (hoping to get Microsoft added in the future). In addition, some of the features specific to Edge such as setting tabs aside and 'brushes' have not yet appeared on the leak. Microsoft has not made a commitment to bring these features to Anaheim, but said it is carefully assessing the features enjoyed by Edge users in the old version and will design to bring them back to this new version. . So, if you are a person who likes the specific features of the old Microsoft Edge version, just 'be assured'.

New features for Edge users have been documented so far including better password manager, search history in browser history, more reliable synchronization on Windows devices, tab group, better PWA application support and finally support Chrome extension.

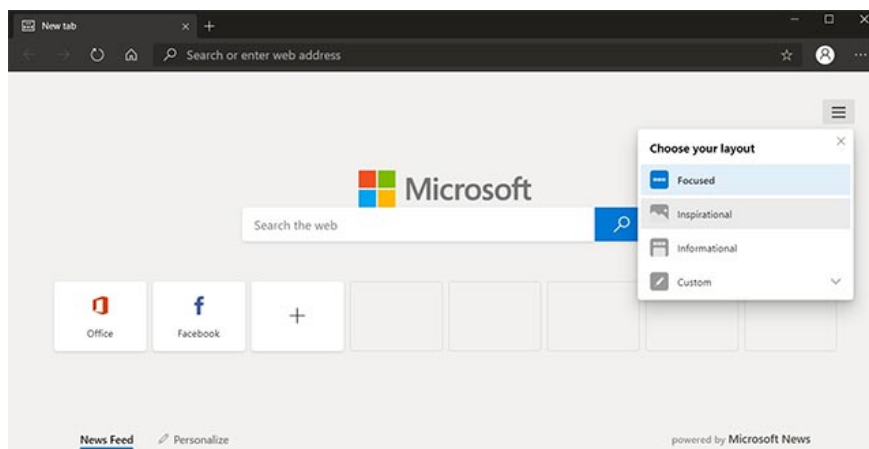

1. Mozilla Firefox and Microsoft Edge browsers were lost at the Pwn2Own 2019 hack contest

Stability will make the brand for the new Microsoft Edge version

First of all, commenting on the ability to support touch and scroll, this first build doesn't seem to be as good as the old Edge, but it is not bad enough because in fact, Chromium has come a long way in Touch support and

operations such as zooming or touching, and these features work quite well. Going through a few forums, one can see that many people want to see Microsoft adding the 'rubber band' effects found in the old Edge, because they give users a somewhat more personal experience. . The lack of this effect when swiping around using the touch screen or touchpad will make those who are familiar with the old Edge feel something 'lacking'.

Talking about the stability of the new Edge, this will undoubtedly be the guideline in Microsoft's direction to develop this application. Although Anaheim was only developed a few months ago, the browser could be considered to have been years ahead of Edge, simply because its Chromium facility was a 'senior' platform. and place in the market. Unlike the original Edge, which is often unstable and less smooth, this new Edge has overcome the problem-solving phase, which can be said to be as stable as Google Chrome today. .

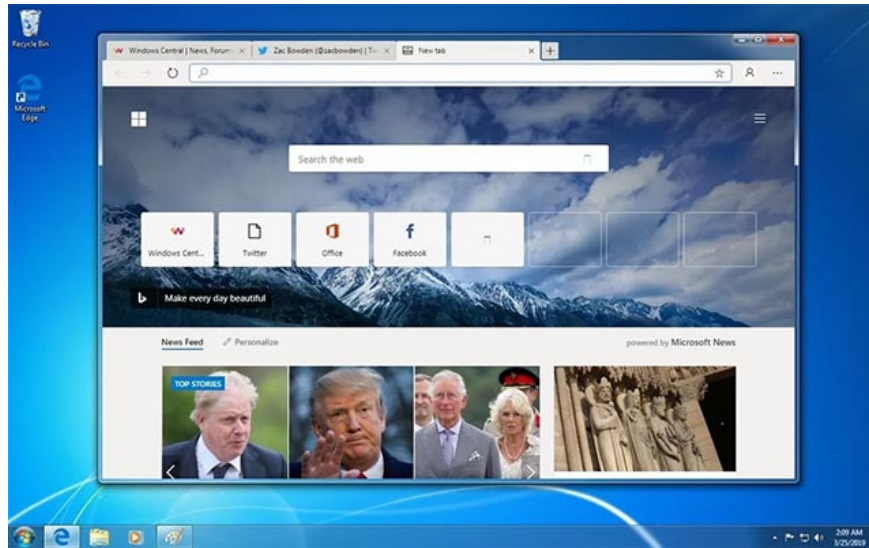

1. Microsoft released the Windows Defender extension for Google Chrome and Firefox browsers to protect the device

Anaheim will use your Microsoft account to synchronize data to the cloud, then this data can be fully accessed when you log in to the browser on other devices. Although you cannot use your Google Account (Google Account), you can still transfer your Chrome data to a new Edge and synchronize with your Microsoft Account (Microsoft Account) quickly. In fact, transferring web browsing data from Chrome or the old Edge is extremely easy and is especially stable, reliable, meaning you won't miss the beat when converting data between submitted platforms Browser.

A promising start for Microsoft

It's hard to deny the greatness of Edge running Chromium core (at least compared to the old version). In addition, because the core of this browser is Chromium and Blink, Microsoft can therefore spend more time building surface-level features, since the tool has been handled quite well by the source community. open. Undoubtedly, this Edge version is the best browser platform Microsoft has ever created, but the problem is whether it's better than Chrome?

Of course, it is still too early to confirm anything, but with performance-related issues, at least it must be 'on par' with Chrome. What will make Edge stand out is the variety of surface-level features that Microsoft built for the browser. Some features such as a better PDF reader, save tabs for later access, and contextual Cortana experience are all things that make Edge new and stand out from competitors. . If you choose to use Google Chrome because of good web visibility, Edge will be able to do the same.

1. Google launched Stadia platform, just need to connect to the Internet and Chrome browser is playing a terrible game, no need for genuine machines

Basically, this new Edge is Google Chrome but built by Microsoft, it is not wrong to say that Microsoft can finally help Google make money, or it could become a threat to Chrome's "throne". in the browser world. If you are a non-Google Windows user, there is no reason not to use this new Edge version. For current Edge users, this new browser is a major improvement in all aspects, I dare say so!
