

# Will your iPhone work with iOS 14?

Last year, Apple announced only iPhones from the last four years would be compatible with iOS 13. We'll tell you if your phone will be compatible with iOS 14.

Apple announced many new features coming to iOS 14 this fall at its Worldwide Developers Conference Monday. The latest updates show a redesigned home screen, including new home screen widgets for the first time on iPhone (\$699 at Apple), as well as a more compact Siri interface. The new iOS 14 update will also let you play a video thumbnail (Picture in Picture) while doing other things and add face coverings to your Memoji this fall.

As with any new iOS update, you may be wondering whether you'll still be able to use your old iPhone or if it's time to upgrade to a newer version. When Apple revealed iOS 13 last year, it announced the update would work with iPhone 6S, iPhone SE (2016) and newer. This year is the same -- Apple isn't excluding the iPhone 6S or its older version of the iPhone SE.

While the new iPhone update won't be available until this fall, developers can still download and install the iOS public developer beta -- everyone else can try the public beta in July. However, we recommend you only try this if you have an older iPhone that you don't use as your primary phone.

Here's the official list of devices that will work with iOS 14 and iPadOS 14. If you're buying a new phone in the fall, it'll come with the new iOS installed.

## Devices that will support iOS 14, iPadOS 14

iPhone 11, 11 Pro, 11 Pro Max  
12.9-inch iPad Pro  
iPhone XS and XS Max
