

Windows 10 2004 Update causes annoying bugs for Google Chrome

After system problems, the recently updated Windows 10 2004 Update (aka Windows 10 May 2020) continues to cause unpleasant problems for Google Chrome browser.

Since the release of Windows 10 2004 Update, improvements have not been found, but every day we see users reporting bugs. After problems related to driver incompatibility . recently Windows 10 2004 continues to cause nasty bugs for Google Chrome browser.

As reported by many users, the Windows 10 2004 Update disrupts the authentication and login feature of Google Chrome. This is the core feature, used by a lot of users. Specifically, Google will forget all the passwords you have saved and you will be logged out of your Google account after restarting your computer.

"After restarting my computer, my Google account was logged out of Chrome. All passwords I saved on Chrome disappeared. I also deleted an extension , " a user said. report on Google forum.

In addition, users also reported that Chrome lost its ability to sync, cookies were not saved every time the browser is closed.

A conspiracy theory immediately appeared that Microsoft intentionally ruined the Chrome experience to entice users to use the new Edge browser. However, this is not true because besides Chrome, a number of other applications also encounter the same error. The built-in Mail app on Windows 10, OneDrive, and Battle.net also requires users to retype the password after rebooting.

Windows 10 2004 Update is a major update with lots of changes. It has been internally tested by Microsoft for 15 months and 5 months for user release in the test Windows Insider program. However, perhaps because the update is too big and supports too many devices, Microsoft cannot fix all the errors before officially releasing.
