

# Windows 10 20H1 will make connecting Bluetooth devices easier

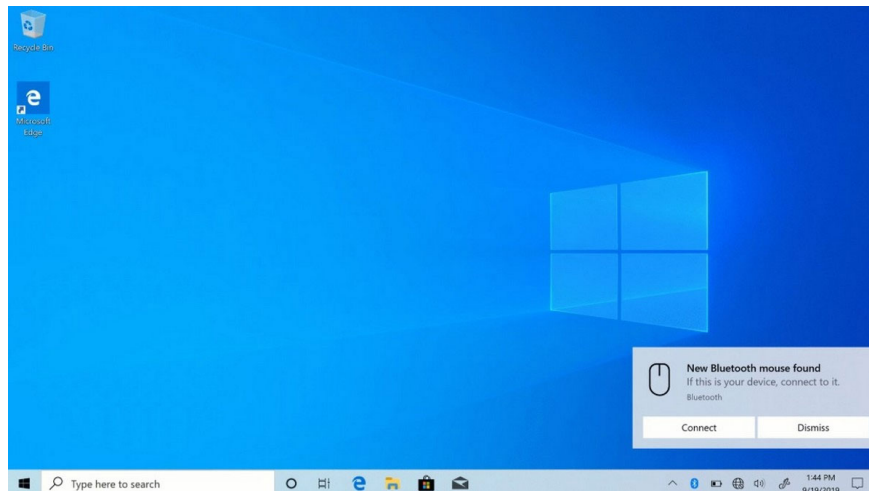

In order to improve the ability to pair peripherals on Windows 10 20H1 via Bluetooth, Microsoft will allow this process to take place right in the notification panel, giving a better experience for users.

Wireless devices are preferred by many users because of their convenience and neatness. Keeping up with this trend, Microsoft has also planned to enhance the wireless experience on Windows 10.

Earlier, in the Windows 10 update in April 2018, Microsoft officially launched a new feature called "Swift Pair", capable of helping users connect computers to peripherals through Bluetooth simply and quickly, with just one click.

In order to improve the ability to pair peripherals on Windows 10 20H1 via Bluetooth, Microsoft will allow this process to take place right in the notification panel, giving a better experience for users.

Specifically, when Swift Pair is turned on and the Bluetooth device is in range, Windows 10 20H1 will display a message asking if the user wants to connect to that device. If the user agrees and clicks on Connect, the computer will automatically connect without having to access the Settings settings with many previous actions. If you do not want to connect, users only need to select Dismiss in the notification.

The notification displays details about the type of device being connected such as a mouse, keyboard, headset .

Currently, the new Swift Pair feature only supports a few devices such as Surface Ergonomic Keyboard, Arc Mouse, Surface Headphones, Precision Mouse, Microsoft Modern Mobile Mouse, Mobile Mouse and Arc Mouse.

Windows 10 version 20H1 is expected to be released in the spring of 2020.
