

Windows 10 Fall Creators Update for mobile devices will be released more widely this week

Along with the release of Windows Fall Creators Update for PC, Microsoft also began deploying this update to mobile devices last week in Finland. This week, Microsoft will expand its deployment to Windows 10 Mobile devices with more open markets.

Along with the release of Windows Fall Creators Update for PC, Microsoft also began deploying this update to mobile devices last week in Finland. This week, Microsoft will expand its deployment to Windows 10 Mobile devices with more open markets.

The Windows 10 Fall Creators Update update will include some new features for the business listed below:

Two-factor authentication: With unlocking by two-factor authentication, businesses can implement an additional layer of security for their critical data through the MDM policy. Once activated, users will have to enter the pin number as followed by the factor specified by the business to unlock the phone like an NFC card (unlocked by using the application and the Companion Device Framework documentation).

AppLocker enhancements: The company has improved UX (User Experience) and updated MDM SyncML scripts associated with enterprise policies. Application restrictions can be configured by ApplicationManagement CSP or AppLocker CSP.

Upgrade VPN: In a modern working environment, the trend of secure access to corporate data through VPN has become the standard. Microsoft has made a series of improvements and upgraded VPN reliability on Windows 10 Mobile. The main updates about VPN are:

1. VPN has the ability to complete pending operations before the device sleeps and disconnects.

2. Automatically reconnect when continued.
3. Enhance tunnel improvements for UWP platform.
4. Improved proxy for UWP VPN profile.
5. Allow using MMS when connecting to VPN.

Recently, Microsoft also announced that it will not add new features for Windows 10 Mobile in the future. However, the company will still provide bug fixes, security updates, .
