

Windows 10 October stick serious errors automatically delete files in the computer

This is a pretty serious error and seems to be related to Windows 10's OneDrive storage application. According to some users posting on Twitter, the update will delete all non-OneDrive data stored in the user directory. .

Windows 10 October has been officially released to all users by Microsoft with many exciting new features such as Dark Theme or Your Phone. However, after upgrading to this major update many users have reflected that it seems that Windows 10 October has automatically deleted document files including music and photo files in the computer. The bad thing is that restoring the settings cannot recover deleted data files.

This is a pretty serious error and seems to be related to Windows 10's OneDrive storage application. According to some users posting on Twitter, the update will delete all non-OneDrive data stored in the user directory. .

In addition, some users also reflect on the Windows 10 October update that extracts its installation files and inserts data files in the Document folder.

The situation becomes even more serious when these users have restored the settings but still cannot retrieve the deleted data files. So, they also give alerts to other users who intend to upgrade to the October 10 Windows update, so back up important data to the OneDrive app or any other cloud service, or back up to removable drives before Windows 10 forces you to install this major update.

Currently, Microsoft has not had any reflection on this incident. But the online community has a lot of complaints, to the point of making photos like this:

1. Before upgrading to Windows 10 October 2018, do these to avoid problems
2. Experience new features of Windows 10 October (1809)
3. Windows 10 October 2018 Update and new highlights will appear
