

Windows 10 Spring Creators postponed the launch date due to trouble

The bad news for Windows 10 users is that the Spring Creators update scheduled for release this week has been postponed.

The bad news for Windows 10 users is that the Spring Creators update scheduled for release this week has been postponed. It is unclear why the reason why Microsoft delayed the release of this update, it is likely that it has detected some serious error.

Typically, major updates of Windows 10 will be deployed in installments, meaning that all users will receive new updates at different times. The deployment of Microsoft may take up to 3 months, for its development schedule will not be affected by this problem (if any).

Earlier, on April 10, Microsoft released the first small update in the Spring Creators update chain with the code KB4100375 to fix numerous errors and solve security problems that appear on Windows versions 10 before.

As expected, the first update will be made by Microsoft later this month.
