

Windows 10 will soon draw a mathematical chart

Based on the open source feature of Calculator - the computer that Microsoft put on GitHub earlier this month, ZDNet discovered the tech giant is adding a graphing mode to computer features on Windows 10.

Based on the open source feature of Calculator - the computer that Microsoft put on GitHub earlier this month, ZDNet discovered the tech giant is adding graphing mode to computer features on Windows 10. Organic features This benefit promises to receive the attention of many users.

Since uploading to GitHub so far, Microsoft has received more than thirty suggestions of improvements from contributors.

Graph mode on Windows 10 is the idea of ??Microsoft engineer Dave Grochocki. He said that algebra serves as a stepping stone for advanced mathematics, other science and engineering courses. However, for American students this is a failed subject, so the graphing feature will help students and students to study algebra and overcome it easily.

Currently, Microsoft is still developing this graphing feature but the notes on GitHub show that users will be able to graph linear, exponential and quadratic equations.
