

Windows 11 has a lot of interesting little details that are carefully taken care of by Microsoft

Microsoft has also learned the meticulousness and care for small details in Windows 11. It's impressive to see Microsoft change not only the design and overall look and feel of the outside, but also the little things as often as they do. we didn't pay attention.

The preview of Windows 11 introduced these very small changes. It's just a new movement when we put the mouse pointer into an option box, or the icons move when they are interacted with. For example, the Sun icon on the dimmer bar, will become larger and the rays lengthen as we increase the brightness.

The special thing is that Microsoft has designed these small details in a harmonious way, pleasing to the eye and not creating any discomfort. The Microsoft design team said: 'Calm is essential in today's world. Windows 11 creates an enabling environment for that, through experiences that feel familiar, soften the user interface, and increase emotion'.
