

# Windows Blue has smaller Live Tiles, supports quick viewing and IE 11

Windows Blue will be a build version of 9364, recently revealed on the online site right on the 57th anniversary of Microsoft CEO Steve Ballmer's birthday.

**Windows Blue will be a build version of 9364, recently revealed on the online site right on the 57th anniversary of Microsoft CEO Steve Ballmer's birthday.**

Accordingly, the first 9364 build completed on March 15, comes with some new changes that Microsoft is developing to become an important update version of Windows 8. Photos leaked Backed by the Winforum page, Microsoft has arranged smaller Live Tiles than the Start screen, along with better control over the color personalization options .

Microsoft is considering developing a quick view of content on **Windows Blue** , allowing users to place side-by-side applications. Not only that, users also get Windows 8 style notification and application tools to take advantage of new features, but developers can quickly change and add APIs.

Users also get some new options in the Windows 8-style installation interface. Microsoft will provide users with all the necessary settings to ensure that users do not have to access the Control Panel. of computers to change things. Selecting SkyDrive is also available to display and control devices and files. Along with that, users can also install options to change the default application as well as information about application size.

Another major improvement is the change in the Charms bar. Accordingly, Devices Charm will include a new Play option that looks similar to the PlayTo options currently available in Windows 8. While Share Charm is the option that allows you to quickly share an image with the app. Internet Explorer 11 is also integrated in Blue, although leaked images do not clearly show the improvements that have been made.
