

Windows Phone 7 is not developed for tablets

Microsoft, the world's largest software company, wants to focus more on optimizing this operating system for smartphones

Microsoft, the world's largest software company, wants to focus more on optimizing this operating system for smartphones .

Microsoft CEO Steve Ballmer has dismissed recent reports that the company is testing Windows Phone 7 phone operating system on several tablet models. Currently, the Redmond-based company will focus only on developing the operating system for smartphones, Steve Ballmer said.

Windows Phone 7 will not develop for tablets.

As soon as the iPad appeared and continued to succeed with the iPhone operating system, rumors have suggested that Microsoft is embracing the idea of ??a good tablet. However, the Courier dual-screen computer, the only project supposedly embodying this ambition of Microsoft, was quenched by the government shortly thereafter.

Currently, there have been a number of tablet models that have been launched on the Windows 7 operating system platform but clearly show the interface disadvantages or capabilities suitable for devices that promote poor mobility. HP, the world's No. 1 computer maker, has also abandoned the Windows 7-based tablet to switch to WebOS after the manufacturer bought Palm for \$ 1.2 billion.

Lilputing said that if Microsoft does not develop Windows Phone 7 operating system for tablets, it is likely that it will "own" a version of Windows 7 for this device with many improvements in interface and features. more suitable.
