

# Windows Repair supports fixing all errors on Windows

Windows Repair is a collection of all the tools to help users quickly fix most of Windows errors such as Internet Explorer, Windows Update, Windows Firewall and more.

**Windows Repair is a collection of all the tools to help users quickly fix most of Windows errors such as Internet Explorer, Windows Update, Windows Firewall and more.**

If you were 'a dabble' then of course, reinstalling Windows or Windows after failing to "weigh" a dozen of your test software is probably quite normal right? If Windows is reinstalled, it will probably take quite some time when Windows has a serious error, but if Windows only has common errors, you can use **Windows Repair** to fix it.

*Windows Repair* is a collection of all the tools to help users quickly fix most of Windows errors such as *Internet Explorer*, *Windows Update*, *Windows Firewall* and more.

After installing, you start **Windows Repair** , the first screen is a welcome message using the same instructions before proceeding.

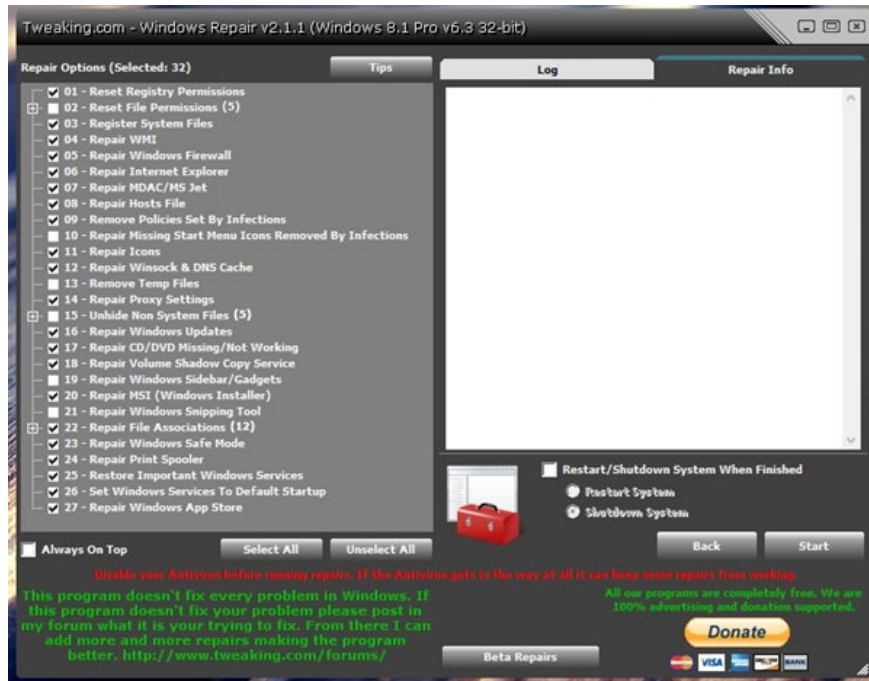

*Windows Repair* will give you four steps to set up your system's protection and error checking. You follow each step in turn to make backups and quickly check the system.

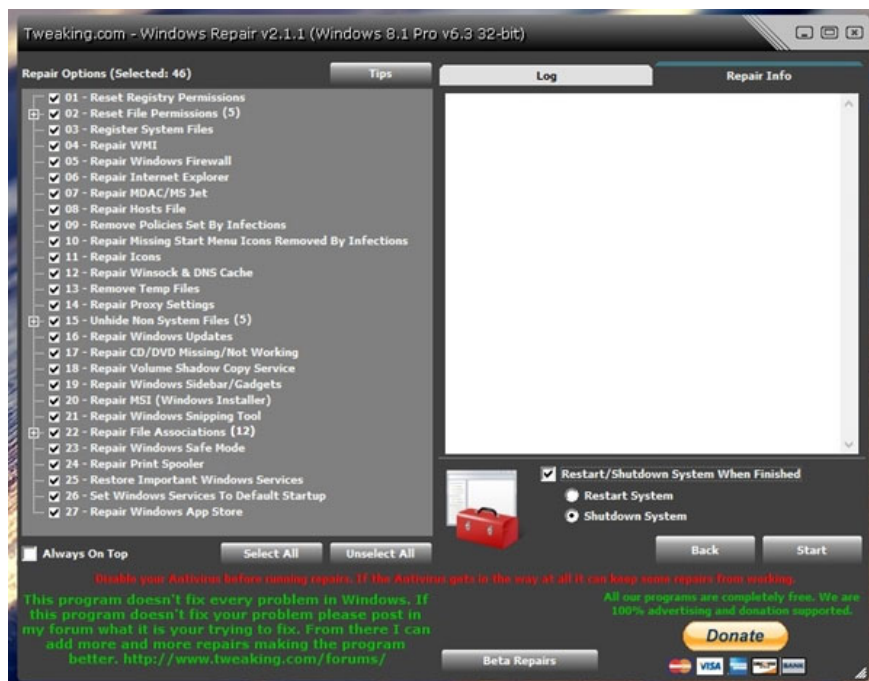

If you are not interested in backup and checking issues, you can skip and click the **Start Repairs** tab and select **Start** to start.

A backup window will appear and proceed to quickly backup the *Registry* keys and set up *System Restore* for you. Once you're done, press Next to start. The main interface of the bug fixes will appear, please check the errors you are having, or select all to restore Windows in the original form.

Next, select 01 of 02 options to turn off or restart the computer after the editing is done. Finally, click **Start** to get *Windows Repair* to work.

Ok, that's all. If you are interested, you can learn more and download the free *Windows Repair* [here](#) .
