

# With paper, pizza, olive nuts and bottle caps, you can still fool Face ID on iPhone X

Apple claims the FaceID feature on iPhone X cannot be unlocked when the user is sleeping. However, through the eyes made of paper and some things on the pizza face, we can easily trick Apple's thousand-dollar phone.

A few days ago, we witnessed a very interesting test conducted by BKAV and made a rather "shocking" video about trying to unlock Face ID on iPhone X with a 3D mask. The image of the eyes, cheeks and mouth simulated and surprisingly, this mask completely deceived the Face ID security feature of iPhone X. Thereby, the public opinion was very confused and there were many mixed remarks. .

1. How to set Face ID on iPhone X
2. BKAV confirms that Face ID on iPhone X is not safe enough, with video proof

After BKAV, recently an experiment shared by you on YouTube once again made the iFan community skeptical of Face ID's security on iPhone X.

According to the news site GearBrain led a test by FaceTec, a famous biometric security company in the US with Zoom face detection application, tried to fool iPhone X by placing fake eyes made of paper on the face of a sleeping user. The surprise is that the FaceID feature on iPhone X has been bypassed and unlocked easily.
