

World fashion modeling software

Programs such as AccuMark, Kaledo 3D Trend ... will help professional or amateur designers easily create new fads with reasonable calculations to save fabrics when sewing.

Programs such as AccuMark, Kaledo 3D Trend . will help professional or amateur designers easily create new fads with reasonable calculations to save fabrics when sewing.

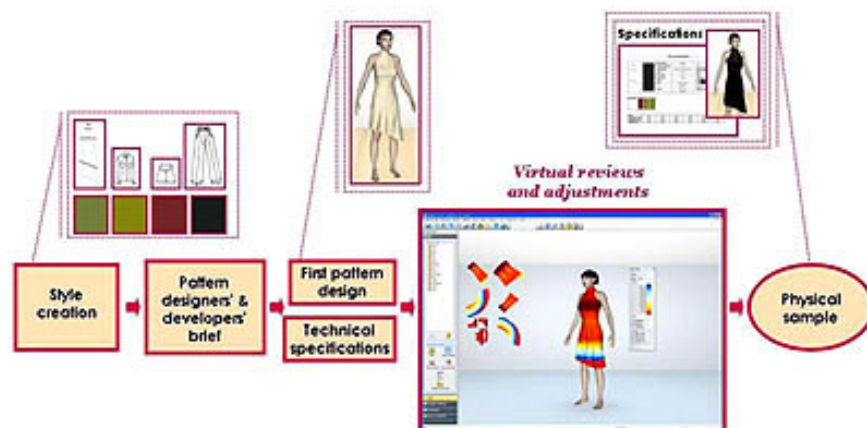

The fashion design programs have been adopted by many fashion houses since the 1990s to improve work efficiency, save materials with artificial intelligence, 3D motion capabilities, real-life avatar worlds . .

V-Stitcher is a module for the AccuMark design program developed by Gerber Technology, allowing designers to determine the amount of fabric that fits the body thanks to 3D models.

Lectra, another popular fashion software firm, offers Modaris 3D Fit.

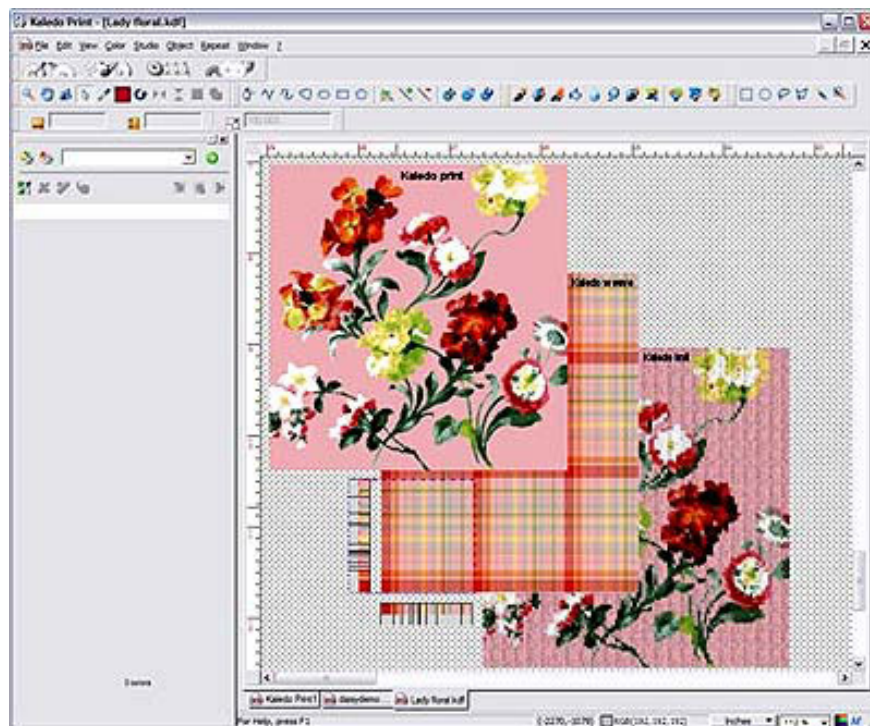

Modaris 3D Fit also allows designers to see the outfit in a 3D environment through a virtual model, then shift parameters to a 2D fabric pattern for tailors.

Lectra's Kaledo 3D Trend software lets you import real-life designs to create a multimedia 3D tool, including photos, videos and audio. The program is now free to try.

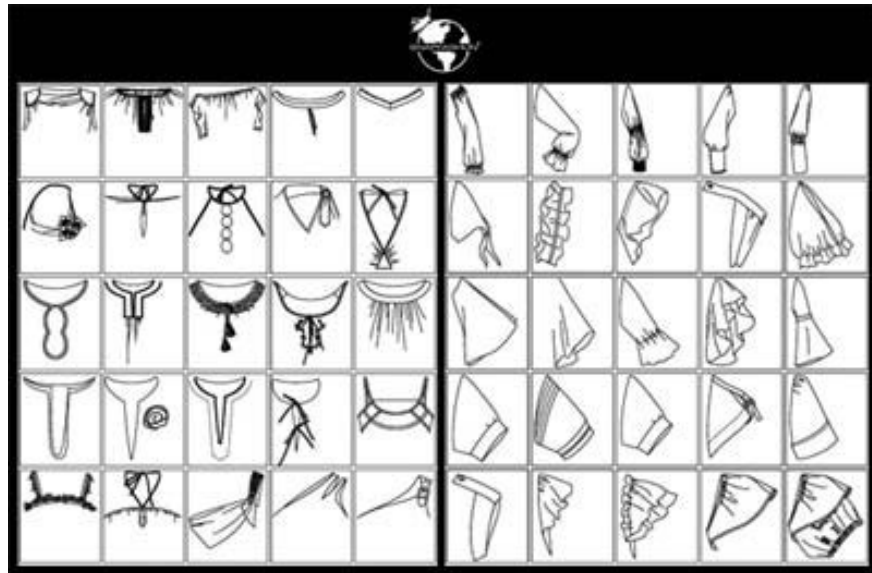

The designs are precisely designed thanks to Gerber's Vision Fashion Studio software. These patterns are scanned, color correction, sharpness and new pattern fabric output.

Lectra's Kaledo Suite also allows designers to design weaving and knitting, serving yarn factories.

Gerber DCS 1500 model cutter is used for small production facilities, can cut many patterns, many sizes, many colors, saving fabric costs.

There are many different fashion design software for professional stylists or tailors. SnapFashun provides an installer for Adobe Illustrator, which helps them connect many elements such as bags, shoulder types, sleeves . to a new template.
