

World of Horror, a horror game developed entirely on MS Paint by a dentist

World of Horror is a special game, unlike any other game because it was created from MS Paint, an application that no one would have expected.

Recently, Pawel Kozminski, a part-time dentist in Poland has surprised many people when developing a horror game called World of Horror. This guy was able to do two things at the same time, examining his teeth while creating his own horror world.

World of Horror is a special game, unlike any other game because it was created from MS Paint, an application that no one would have expected.

World of Horror is based on Junji Ito's five short stories of horror, bringing gamers to a magical village in Japan in the 1980s. Here, there are countless strange phenomena, monsters sea ??animals appeared, the guys suddenly went crazy rushed into the blind eye blindness, the shadowy figures wandering around the forest .

In the game, players will be able to enter many different characters, fight monsters to survive, solve secrets and rescue the village.

World of Horror graphics are just 1-bit black-and-white images that make players seem to be turning pages of comics. All graphics in the game are made using MS Paint software but bring fear to the player even stronger than many other 3D games.

World of Horror will be distributed on Steam later this year and will appear on consoles such as PlayStation 4 and Switch.

1. Livestream 25 hours continuously, gamers are still healthy, but PC screen blue error
2. 'Hack' the dinosaur game of Google Chrome to make your T-Rex immortal and max speed
