

# WWDC 2019: Apple announces a top, 6K, 32-inch, \$4,999 display screen

As part of WWDC 2019's first day, Apple has officially released details of the Pro Display XDR panel display, along with the Mac Pro 2019, with a completely new look.

Within the first day of WWDC 2019, Apple officially announced details of the top display model Pro Display XDR, along with the Mac Pro 2019 with a completely new look. About the Mac Pro, we have a brief introduction about this product, please refer here.

Going back to the main issue, this new 32-inch LCD monitor will have 6016 x 3384 Retina 6K factory-calibrated panels, with an ultra-thin bezel border design, only 9mm. As the Kitchen's top screen model, of course Pro Display XDR is not cheap: \$ 4,999, and a Pro Stand stand will be sold separately for \$ 999.

1. Apple officially launched its own operating system for iPad, multitasking features, support for reading files from USB, SD memory cards

Going deeper into the hardware configuration details, Pro Display XDR (XDR stands for Extreme Dynamic Range - extremely high dynamic range), possesses P3 and 10-bit color spaces with multiple reference modes. Built-in manufacturer, as well as the exclusive Apple True Tone auto chromatic tuner, exclusively for adjusting ambient light. The light band around Pro's display Display XDR is said to be 40% wider than the predecessor iMK 5K screen, and the product is also equipped with anti-glare coating, as well as an option of surface roughness. The screen is called nanotexture, which not only protects against fingerprints and also provides better heat dissipation efficiency.

Launched to "pair up" with Mac Pro 2019, so the Pro Display XDR shell will also have a 'cheese piece' design language with dense radiator holes in a stylized pattern. on the back, both ensure aesthetics, be consistent with the Mac Pro, and also support more optimal heat dissipation. According to Apple engineers, this design allows the screen to achieve full brightness at 1,000 nit, and can even reach up to 1,600 nit - bright levels especially useful for tasks. related to professional HDR content editing.

1. Apple introduced iOS 13, supports dark background mode, opens apps twice as fast and many new features

Speaking of Pro Stand base for 999 USD, this part can tilt and adjust the screen height extremely flexible. According to Apple, the Pro Stand can be considered as a counterweight arm that makes the screen feel almost weightless in every angle of adjustment, and this smart stand can also help Pro Display XDR rotate. to Portrait Mode - vertical screen, easily and surely, offers much more flexible work than its predecessor as well as competitors in the same segment.
