

X6 is the first Nokia phone with rabbit ears

A Nokia phone is not manufactured by Nokia.

HMD Global has just announced the launch of a Nokia-branded phone for the Chinese market under the name of the X series. The most recognizable feature is the 19: 9 aspect ratio with the FHD + 5.8 inch (2280 x 1080) screen. Corning Gorilla Glass's protective layer 3. The Nokia X6's front view generally accounts for 95% of the screen, the rest are metal frames with blue, black and silver colors.

Nokia X6 runs 636 Snapdragon chip, 4GB RAM and 32GB or 64GB internal memory. The more advanced version has 6GB RAM and 64GB memory. All have microSD card slots and fingerprint sensors on the back. The X6 only has a USB-C port, can get Quick Charge 3.0 or charge 50% for 30 minutes.

The camera is very interesting, the front is a 16 megapixel camera with an aperture of f / 2.0 (with face unlock). Behind it is also the 16MP f / 2.0 camera along with the camera monochrome 5MP f / 2.2. All have AI that supports functions such as defocusing the background or face recognition.

Nokia branded phones appear more and more

The X6 manufacturers promise to run Android P after their debut, so it may be running Android 8.1 Oreo. The launch took place in China on May 21, with a starting price of about \$ 204 for the 4GB / 32GB. The mid-range 4GB / 64GB will cost \$ 236 and the higher-end 6GB / 64GB line will cost \$ 266.

It is not known if the product is available in countries outside China.
