

# Xiaomi launched Mi Mix 2 phone with surprisingly cheap price

Perhaps Xiaomi is the only company that dares to launch its flagship phone just a day before Apple's big iPhone announcement event.

Perhaps Xiaomi is the only company that dares to launch its flagship phone just a day before Apple's big iPhone announcement event. However, the Chinese phone company also has its own style. They launched the beautiful Mi Mix 2, almost without bezel with attractive specifications and very affordable prices.

Like Mi Mix's predecessor, Xiaomi's Mi Mix 2 has a large screen with a very small bezel on the top and sides. The most visible bezel is where the front camera is located. This detail can cause many people to sigh in frustration but despite the oddly selfie camera design, this phone is actually very interesting.

Mi Mix 2 owns a 5.99 inch 18: 9 screen with hidden speakers (interestingly, the company has dropped the speaker using piezoelectric technology from Mi Mix). Mi Mix 2 is 11.9% smaller than the original, has a thin bezel (though in fact, the Mi Mix 1 has a larger 6.44 inch screen).

*Xiaomi Mi Mix 2 is cheaper than the same flagship*

The phone uses Qualcomm Snapdragon 835 processor, which is quite standard for flagship phones on Android today, 6GB RAM and 64/128 / 256GB memory. Alternatively, you can buy the Mi Mix 2 Special Edition with ceramic body and 8GB of RAM and 128GB of memory.

Mi Mix 2 only has a 12-megapixel camera on the back, although other Xiaomi phones have dual cameras.

For example, Xiaomi has released Mi Note 3 on the same day as Mi Mix. The Mi Note 3 has a dual camera, capable of capturing bokeh effects, a 16-megapixel selfie camera with 5.5-inch screen and 3.500mAh battery.

Return to Mi Mix 2. The 64GB version costs about \$ 506 while the price of 128GB and 256GB is \$ 552 and \$ 614 respectively. Special edition is priced at \$ 721. Although not as cheap as previous Xiaomi phones, compared to similar flagships, it is still cheaper. Best of all, Mi Mix 2 can be used anywhere, using 43 LTE Bands bandwidth.
