

# Xiaomi launched Mi MIX Alpha with an unbelievable design: The screen surrounding the body, accounting for 180%, 108MP camera

Mi MIX Alpha is the product that inherits the success of the Mi MIX 3 with an improved design and configuration that surprised everyone.

Today, Xiaomi has officially launched the Mi MIX Alpha at a company's event held in China. This is the product that inherits the success of the Mi MIX 3 with an improved design and configuration that surprised everyone.

Xiaomi says Mi MIX Alpha is a "smartphone concept". This unimaginable smartphone will only be made in limited quantities and will cost 19,999 yuan (about \$ 2,800).

Mi MIX Alpha has an incredible design, with a screen that spills from front to back and wraps around almost the entire body, leaving only one strip behind to equip the camera assembly, flash and Mi MIX logo.

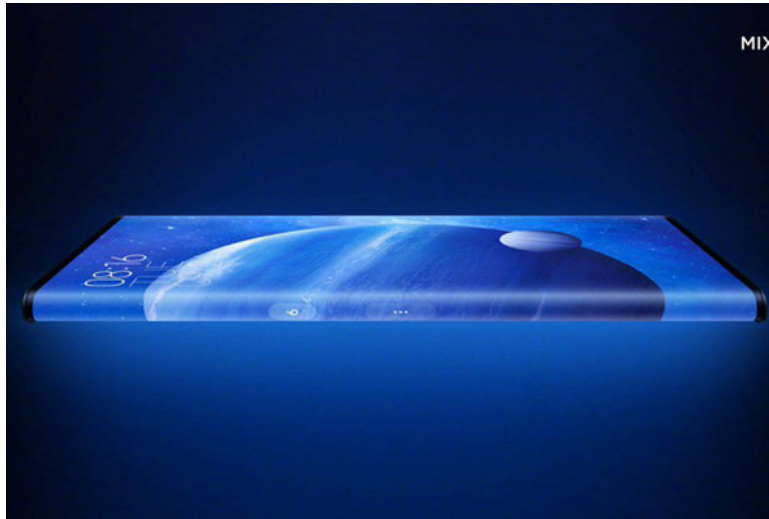

This special design helps Mi MIX Alpha remove selfie camera. When you need to take a selfie, users will always use the three main cameras of the device and use the rear screen as the viewfinder.

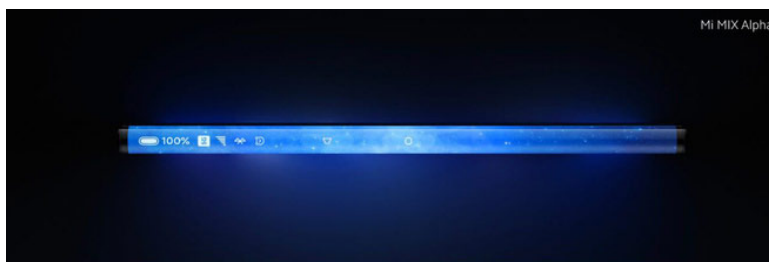

Status icons such as battery, 5G network signal, etc. are displayed on the side.

The cluster of three main cameras of Mi MIX Alpha includes the highest-resolution 108MP camera sensor on Samsung's current smartphone, two 20MP and 12MP secondary cameras.

The rear stripe is made of ceramic and titanium, and then covered with sapphire glass to prevent scratches.

To disable unwanted touches on the sides of the smartphone, Xiaomi used AI and special sensors. The right side is equipped with a tactile feedback mechanism that makes it possible for the user to touch and adjust the volume.

Mi MIX Alpha is equipped with Snapdragon 855+ processor, 12GB of RAM, UFS 3.0 512GB memory, a 4,050 mAh battery and 40W fast charging. The battery capacity is quite small, so it is possible that the rear screen will only turn on when taking selfies.

1. Samsung, Xiaomi, Huawei, Oppo and Nokia timelines and models are updated to Android 10
