

Xiaomi launched the Daewoo F9 Bladeless bladeless fan, which features air filtration, priced at US \$ 140

Bladeless fan like high-end products of the Dyson brand.

Xiaomi has just launched a new smart product on the Youpin platform, the Daewoo F9 Bladeless bladeless fan. This fan works like the outstanding products from leading brand Dyson, using an air compressor instead of the rotor to get air.

Without the rotating rotors like a conventional fan, Daewoo F9 Bladeless does not generate dust, nor is it dangerous to children.

Daewoo F9 Bladeless provides up to 9 different wind speeds. Grades 1 - 3, called prairie wind, will blow out a breeze naturally, without making a noise. Levels 4 - 6, called mountain breezes, will blow out stronger, cooler breezes. Grades 7 - 9 are called the sea breeze, bring the strongest breeze and dry.

In addition, this fan is also equipped with two HEPA air filters. It is capable of removing formaldehyde organic compounds up to 95.2%, removing toxic TVOC organic compounds up to 89.7%. So the fan not only filters the air, but also eliminates unpleasant odors.

Daewoo F9 Bladeless also has a function of rotating left and right 60 degrees, and 20 degrees tilt up and down. Xiaomi is currently selling this bladeless fan for 969 yuan (US \$ 140).
