

Xiaomi Mi Watch design leak, like Apple Watch, many advanced features, with eSIM

This product has a square face and sides with a knob and a crack on the right edge, quite similar to the Apple Watch design.

The Mi Watch is the most notable device in Xiaomi's new series of products that will launch on November 5. Finally, Xiaomi has launched its first smartwatch.

Today, CEO Lei Jun revealed the actual image of Mi Watch through Weibo. This product has a square face and sides with a knob and a crack on the right edge, quite similar to the Apple Watch design.

As revealed by Xiaomi, the Mi Watch will have features like high-end smartwatches. That means Xiaomi's own smartwatch will support independent WiFi, GPS and NFC, along with a linear motor and speakers.

Mi Watch allows users to make calls thanks to eSIM support. The power of the Mi Watch is provided by the Qualcomm SoC chip, possibly the Qualcomm Snapdragon Wear 3100. This device will probably run Mi Wear OS, a customized version of Google's Android Wear operating system.

In addition to Mi Watch, Xiaomi also launched the Xiaomi Mi CC9 Pro phone with 108MP camera system and the new Xiaomi Mi TV 5 series at the upcoming event.

1. Huawei launches Watch GT 2, listens for smartphones, 2-week battery, 50m waterproof, priced from 5.49 million
2. Xiaomi launched Haylou LS01 smartwatch, 14-day battery, priced at VND 330,000
