

# Xiaomi officially announced the first images of the Mi 9 Explorer smartphone with a 'transparent' back.

Last year, Xiaomi released a unique version with a beautiful, transparent back of Mi 8 phone, called Mi 8 Explorer Edition.

Last year, Xiaomi released a unique version with a beautiful, transparent back of Mi 8 phone, called Mi 8 Explorer Edition. Specifically, Mi8 EE is equipped with a transparent back, can see through all hardware components arranged carefully and reasonably inside. At the time this phone was released, many people suspected that this was actually just a picture of the components inside the phone, printed meticulously on the back, not a transparent back. really because it looks so cool, and this suspicion is not wrong.

Today, Xiaomi has officially announced that it will continue to release a Mi 9 Explorer version for the upcoming Mi 9 product line. However, Android Police said this version will have an important difference: Lei Jun, founder and CEO of Xiaomi, admitted that the image of components inside the phone is actually just a thin, carved CNC aluminum plate looks exactly like a stylized version of real components.

## 1. 5 Reason to convince you to own Xiaomi Miband 2 bracelet

This will probably be a fact that is not pleasant for Xiaomi fans, but to be fair, we should also give compliments to Chinese producers because at least they dare to admit it. In public, in other words, it is more transparent about our products, and in fact, Xiaomi is very caring about the finishing of the product, so that it can "fool" quite a lot. people.

Putting aside the problem of appearance to the side, as usual, it is likely that Xiaomi Mi 9 will continue to be a product priced in the high-end segment, but will be equipped with the same configuration with a few Other high-end product lines. Accordingly, Mi 9 will certainly be equipped with the top chip of 2019 is Snapdragon 855. In addition, this will also be the first smartphone of Xiaomi own Turbo Game features - allowing the device to be optimized. GPU performance, reduce battery consumption and temperature, provide a smoother gaming experience. On the other hand, this smartphone also owns fingerprint sensor technology that is integrated directly into the new generation screen, for unlocking speed increased to 25%. The display will still be a border overflow, 'water droplet', with a well-optimized bezel border, significantly thinner than its predecessor.

#### 1. Why are flagship smartphones more expensive?

Xiaomi Mi 9 will be equipped with 3-sensor rear camera cluster, with a resolution of 48MP, 12MP and 16MP respectively, while the selfie camera will have a resolution of 20 MP. And of course the device will also be run on the latest Android 10 platform.

Under the plan, Xiaomi will officially introduce Mi 9 at MWC 2019 event, taking place in Barcelona on February 24th. Currently, the price of the product has not been disclosed.
