

## Yahoo! attacked, no damage

Yahoo! has just confirmed that their server was hacked earlier this week but user data is still safe.

**Yahoo! has just confirmed that their server was hacked earlier this week but user data is still safe.**

Earlier, security researchers scanned the system for fear of risk from the recent *Shellshock* vulnerability and discovered the Yahoo! risk of being attacked. Then they contacted Yahoo! to warn. Yahoo! immediately checked and found that my server was compromised through a security hole, but not Shellshock.

*"After a full investigation, we concluded that the Yahoo! server is in fact not directly affected by Shellshock, but another vulnerability. We did not find any user information. affected by this problem,"* Yahoo! said to *BBC News*.

In another statement, Yahoo! Alex Stamos revealed that the company has also added a number of tools to "capture security issues" in the future.
