

Yahoo supports multitasking: quick access to email, search and drafts

Yahoo! Officially updated with new features for email service. The highlight of this update is Yahoo! Mail supports multitasking.

Yahoo! Officially updated with new features for email service. The highlight of this update is Yahoo! Mail supports multitasking.

In a company's blog post, *Ratan Hudda* 's technical director explained that Yahoo users wished they could switch between email, search results and emails that were being written down. So, to please our users, in this update, Yahoo Mail has added the Recent option to allow its users to perform multiple tasks in the same tab of the browser.

After you log in to your Yahoo account, there will be up to 3 items of your recent activities displayed including things like messages you have written or badly written messages, emails you have opened. recently, or your last search result. And the 10 most recent emails you have viewed will also be displayed, the company thinks that doing so will help identify personal messages more easily and quickly.

You can also use the shortcut " **Ctrl** " + " [" and " **Ctrl** " + "] " on Windows or " ? " + " [" and " ? " + "] " on the Mac to quickly access this feature .

Updates for Yahoo! Mail this time is not surprising when Yahoo is being driven by a mature and ambitious CEO like Marissa Mayer. Mayer, after becoming CEO of Yahoo, has had a series of reforms across all of the company's services and Yahoo! Mail is one of them. And the biggest change of Yahoo! Mail under Mayer's time is the interface. And this update is a powerful addition to Yahoo! Mail in the battle to regain market share from two rival rivals, Gmail and Outlook Mail.

Currently, the feature is only available on the Web version, not for applications on smartphones. And not all users can experience it right now. That will only happen in the next few weeks.
