Recently, the Windows RT jailbreak tool has been released by a hacker in the popular xda-developer forum. When Windows RT is jailbroken, users can fully install PC applications on this platform.

Therefore, we can say that jailbreak will make Windows RT become Windows 8. However, this jailbreak tool is only tethered (not completely) because users will have to jailbreak every time Windows restarts. RT. In the near future, it is likely that xda-developer hackers will complete this tool on the untethered level allowing users to just jailbreak once even when the device is restarted.

Being able to jailbreak Windows RT is a positive signal for users of this operating system. However, this may also be the reason why the Windows RT application ecosystem is unlikely to grow. In return, Microsoft will not have to worry about the lack of applications for its Windows RT platform by taking advantage of the community power. Reportedly, a hacker had successfully hacked his Surface RT to run Apple's OS X operating system.
