

Your phone's battery is still not fully charged all day, why don't you try pressing this small button to charge it 10 times faster without harming your phone?

When charging your phone battery, you should turn on this mode to charge faster, apply now.

Turn on airplane mode when charging

When charging your phone, you should turn on airplane mode to help save battery. This mode will block all unnecessary connections such as wifi, incoming calls, outgoing calls, and thus will help the phone fill up the battery faster. How to turn on airplane mode depends on each phone model.

You should turn on airplane mode to help save battery

Turn on battery saving mode

Currently, most Android devices running the Lollipop operating system have a battery saving mode. Please use this mode for faster charging. Why? Because when this mode is turned on, the device will automatically regulate and reduce energy usage, thereby helping to conserve energy better and the battery will fill up faster.

Use low power mode

To turn on low power mode, you need to go to Settings > Battery > Swipe right to turn on Low power mode.

Low Power Mode is a feature that will help reduce your iPhone's activity. This feature is often used to help you save battery life, but you can also use it to help your iPhone charge faster.

When low power mode is on, your iPhone won't be working as much, so its battery will charge a little faster. Remember that most apps won't update in the background, so you won't receive notifications or emails.

Turn off battery charging optimization

Battery charging optimization feature to help increase iPhone battery life. It does this by learning the user's charging habits and making the iPhone charge more slowly after reaching the 80% mark. That means your Phone will charge slower by default.

You can disable this feature as follows:

Step 1: Settings > Battery > Battery status.

Step 2: Select Optimized battery charging > Off.

Turn off the phone when charging

If there is no need, you should turn off the phone. This is the fastest battery charging tip you should not ignore. When the system stops operating, the energy received will be complete without being consumed. If you need to go urgently, just a few minutes will give you a significant amount of battery with this fastest battery charging tip.

Each phone line will have a certain charger. Although we can use them interchangeably, it's really not good. The charger that comes with the device will help transmit the correct current specified by the manufacturer into the device. There are some poor quality ship chargers that cause low power input and charging time will take twice as long or longer. This has been tested by the writer himself and found to be completely true.
