

# YouTube allows users to download videos on web browsers

Recently, some users have shared with Android Police news site that Youtube is providing the option to download videos on the web browser.

If you want to download videos from YouTube on a web browser, users will have to use their own websites or third-party tools such as IDM, Coc Coc. but cannot download them directly like on smartphones.

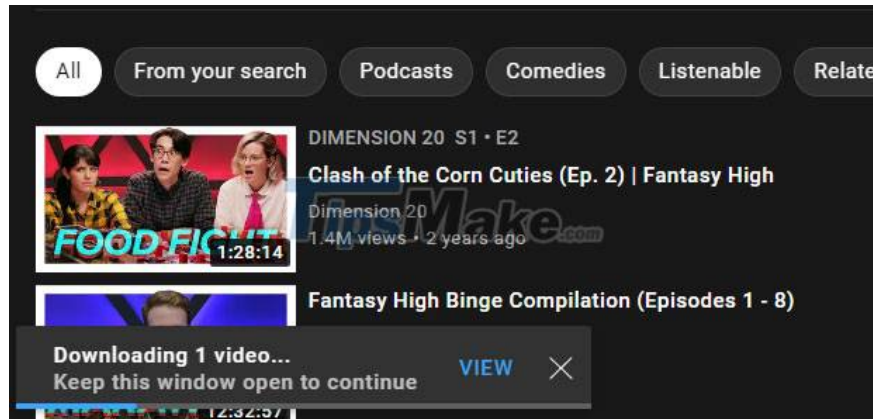

However, recently some users have shared with Android Police news site that Youtube is providing the option to download videos on the web browser. This feature is being offered by YouTube to users who have signed up for Youtube Premium accounts in India, France and some other parts of the world.

For now, you can also try out this useful new YouTube feature by visiting [youtube.com/new](https://youtube.com/new), note you must have a YouTube Premium account.

You will then see a Download button appear in the toolbar below the title of the video. To download videos, users simply need to click this button. Google also allows users to choose to download videos in a variety of qualities with a maximum of 1080p in Settings. In addition, users can also delete all downloaded content.

Downloaded videos can be played back at [youtube.com/feed/downloads](https://youtube.com/feed/downloads).

This beta feature will end on October 19. This feature will work on Windows, MacOS, and Chrome OS.

Hopefully after the testing period, this feature will be released permanently as well as coming to regular Youtube accounts, giving users a simple way for you to download videos from YouTube on the web without having to use tools. third-party.
